This catalyst is a ruthenium (I) catalyst composed of 3 triphenylphosphines, carbon monoxide, and a hydride. In its d8, 18e state with all of the PPh₃ ligands attached it is inactive and only becomes active once a PPh₃ ligand dissociates making it a d8, 16e complex. It then undergoes complexation to a terminal alkene, migratory insertion of a hydride, oxidative addition of H₂, and finally reductive elimination to produce the reduced Alkane and regenerate the active catalyst.
