Turanabol 10 mg Balkan Pharmaceuticals is used for several purposes: mass gain, cutting, increasing endurance. To achieve a certain result, you should take the drug according to specific rules. Key recommendations: the average dose is 20-40 mg per day, usually this amount is divided into 2-3 doses;

Turinabol is typically taken in doses of 20 to 40 mg (2-4 tablets) per day by athletes, compared to 5 to 15 mg for females per day. Sticking to the recommended dosage is crucial because varying from it can have unfavorable effects. You can increase the dosage to 40 mg per day if you weigh more than 90 kg and are no longer a new steroid user. [hop over to this web-site](#)
