Stanozolol is the DHT hormone with two structural changes that give us the Winstrol compound. [hop over to this site](#)

Each ml of SP Stanoject contains 50 mg of Stanozolol; Route of administration For intramuscular use only; Indications: Stanozolol is used to treat general deterioration, aplastic anemia, anorexia rebel, convalescent, chronic and debilitating diseases, postmenopausal osteoporosis or elderly, muscle wasting, and the negative balance nitrogen. Femal will administrate StanoJect EUROCHEM approximate in the range of 50 mg day by day, or 1.5mg -5mg -2 mg tablets. Although female athletes usually find StanoJect EUROCHEM very supportable, the injectable is regularly off restrictions. They risk androgenic buildup, as a regular 50 mg injection of this medication will run much too high a measure. [talks about it](#)
