Boldenone is a synthetic anabolic-androgenic steroid that was initially formulated for veterinary use but has become one of the most popular performance-enhancing drugs that professionals test positive for in competition. Boldenone, a chemical composition that is identical to testosterone, can induce protein synthesis and erythropoietin release in the kidneys.

Boldenone undecylenate is an androgen ester that has a long half-life in the body. In males, boldenone reduces testosterone production. Boldenone has been shown in animal studies to cause considerable harm to the male reproductive system and fertility, including decreased testes size, lower sperm count, and low testosterone mobility.
