The Trenbolone Enanthate or Tren in short is mostly used by advanced users as it is five times stronger than testosterone.

### ? Trenbolone Enanthate (Tren 100) for sale: Side Effects ...

Trenbolone Enanthate is a modern steroid drug. It is based on the active substance Trenbolone (parabolan) with the binding of the enanthate ester. The drug has a number of universal functions that

make it one of the main steroids used by athletes in the pre-competition period.

Trenbolone Enanthate is an extremely powerful anabolic steroid and is virtually interchangeable with Parabolan (Trenbolone Hexahydrobenzylcarbonate). All Trenbolone compounds carry the same, identical Trenbolone hormone. The only difference in the compounds is the ester attached, which helps to control the hormone's releasing activity.
