Turinabol is a modified form of Dianabol, but while Dianabol has generally mild estrogenic effects, Turinabol has none. This is the result of attaching a chlorine group to the carbon position no. 4 in the steroid's structure, which blocks the aromatase enzyme from converting Turinabol into estrogen.

Turanaxyl with its dynamic substance 4-Chlorodehydromethyltestosterone is an oral anabolic steroid that has a dominantly anabolic impact joined with a moderately low androgenic part. Turanaxyl does not incite a quick pick up in quality, weight or bulk. The real impact is a strong muscle increase and great quality addition, if taken a few weeks.

It is important to know that Chlorodehydromethyltestosterone (Turinabol) is not extensively metabolized by the 5 alpha reductase enzyme. This means that its relative androgen activity is not going to be greatly altered by the use of the 5 alpha reductase products such as dutasteride or finasteride. Turinabol

Pretty much seems to only be politicians that want to keep it illegal to protect their big pharma and big tobacco friends who pay them to do so. Let's say fuck all that and just do what's right for once, maybe?... either that or we should just terminate anyone who opposes cannabis. At this point they are denying scientific data just to keep their lobbyists happy. It's incriminating people who are just medicating and trying to feel better... Why, other than \$\$, is it still illegal because I can't think of one reason, even that is a shit reason because it makes the economy blow up like crazy, ppl love their pot??>?????. They always try to convince us that we are their bosses, well I say prove it by legalizing pot federally, because we all know lobbyists control the world not us??>????.
