(redirected from anabolic hormones) Also found in: Dictionary, Thesaurus, Encyclopedia. hormone [hor'mōn] a chemical transmitter substance produced by cells of the body and transported by the bloodstream to the cells and organs on which it has a specific regulatory effect. adj., adjhormo'nal. hormone (redirected from anabolic hormones) Also found in: Thesaurus, Medical, Encyclopedia . hor'mone (hōr'mōn') n. 1. a. A substance, usually a peptide or steroid, produced by one tissue and conveyed by the bloodstream to another to effect physiological activity, such as growth or metabolism. b.

An anabolic hormone is a chemical that encourages cellular growth, usually building molecules up and into something new once they've been broken down. They play an essential role in the metabolic processes of humans and many animals, and are responsible for things like muscle growth and the expansion of nerve pathways.

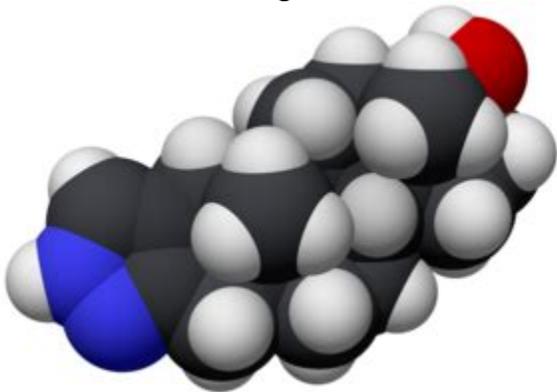

What does anabolic hormone mean? Anabolic hormones include growth hormone, testosterone and estrogen. Anabolic processes are responsible for cell differentiation and increases in body size. Bone mineralization and muscle mass are attributed to these processes. Anabolic processes produce peptides, proteins, polysaccharides, lipids and nucleic acids. [prev](#)

For androgens as natural hormones, see Androgen. Anabolic steroids, also known more properly as anabolic-androgenic steroids ( AAS ), are steroidal androgens that include natural androgens like testosterone as well as synthetic androgens that are structurally related and have similar effects to testosterone.

Anabolic Hormones. Anabolic hormones are the hormones that build tissue. Not only do anabolic hormones build muscle, they can build fatty tissue as well. So it is important to know which hormones do what. The following is a list of the anabolic hormones and what their effect is on the tissues.

Definition of anabolic steroid : any of a group of usually synthetic hormones that are derivatives of testosterone, are used medically especially to promote tissue growth, and are sometimes abused by athletes to increase the size and strength of their muscles and improve endurance Examples of anabolic steroid in a Sentence What are anabolic steroids? Anabolic steroids are synthetic, or human-made, variations of the male sex hormone testosterone. The proper term for these compounds is anabolic-androgenic steroids. "Anabolic" refers to muscle building, and
