For low testosterone treatment standard Testosterone Propionate doses will normally fall in the 25-50mg per injection range and are normally given 2-3 times per week. However, keep in mind in the modern age it is rarely used when compounds like Cypionate or Enanthate are available.

PHARMACEUTICA

If I take 50 mg Test prop ED and 50 mg Tren Ace ED, how long until I can expect to notice any gains and strength improvement? Can you actually feel a difference? Or just see it? And I know that 50mg of test prop is not ideal, but to make a long story short, thats what I have. Thanks, Nick :mix: [go right here](#)

A base Testosterone Propionate cycle will work and produce results every time it's implemented regardless of your level of experience. For such a plan, 100mg of Testosterone Propionate for 8-12 weeks is a perfect starting point. This is also the only anabolic steroid many will need in such a plan. Most men will, however, need to include an.
