Testosterone enanthate is also known as testosterone heptanoate . It is an anabolic and androgenic steroid (AAS) drug used to treat low testosterone levels. Anabolic drugs work by building muscles, while androgenic means it enhances sex characteristics usually associated with males. This drug has been used in medical procedures since the 1950s. Testosterone Enanthate, USP is designated chemically as androst-4-en-3-one, 17- [(1-oxoheptyl)-oxy]-, (17 β)-. Structural formula: CLINICAL PHARMACOLOGY Endogenous androgens are responsible for the normal growth and development of the male sex organs and for maintenance of secondary sex characteristics.

USP 31 (Testosterone Enanthate). A white or creamy-white crystalline powder. It is odourless or has a faint odour characteristic of heptanoic acid. Insoluble in water; very soluble in ether; soluble in vegetable oils. Store at a temperature of 2° to 8°. Protect from light. Testosterone E contains: 250mg.

Testosterone enanthate is used in women to treat breast cancer that has spread to other parts of the body (metastatic) and cannot be treated with surgery. Testosterone will not enhance athletic performance and should not be used for that purpose. Testosterone Enanthate may also be used for purposes not listed in this medication guide.
