Dr. Clarence Greene received his M.D. from the #HowardUniversity College of #Medicine with distinction in 1936. After seven years of general #surgery residency and four years as a professor of surgery at Howard University, he was granted the opportunity by the legendary Wilder G. Penfield to train in #neurosurgery at the world-renowned Montreal Neurological Institute from 1947 to 1949. Receiving high praise from Dr. Penfield, Dr. Greene became the first African-American certified by the American Board of Neurological Surgery on Oct. 22, 1953. Subsequently, he was appointed as chair of neurosurgery at Howard University, where he successfully treated intracranial aneurysms, brain tumors, and herniated intervertebral discs until his tragic death from a heart attack in 1957. Salute to his memory

##essencemagazine #Positiverolemodels $75\text{mcg} \times 3 \text{ per day} = 225\text{mcg}$ T3 per day = 675mcg T4 (assuming T3 is 3 times as potent as T4). This is a ludicrous amount to be taking, and it may even be deadly. No, I take (ideally) 1 75mcg capsule a day, emptied and divided into three, but it's hard to divide it correctly, so I'm looking for T3 in 25mcgs... And the funny thing is that the alga which gave rise to the chloroplasts in the euglenid, got its chloroplasts from a cyanobacterium millions of years before it ended up being a part of the euglenids. This is called the secondary endosymbiosis and it happened to many different groups of organisms many times! [my latest blog post](#)
