Hgh Somatropin 50 Iu

History of colors of the HGH tops. Before the existence of generic HGH labs in China, the yellow tops were used by Jintropin (GeneScience Pharmaceuticals), blue tops were used by Hypertropin (Neogenica Bioscience) and green tops were used for Igtropin (IGF-1 long R3). In 2007, both Jintropin and Hypertropin switched to using green color caps. Jintropin stimulates skeletal and somatic growth, and activates metabolic reactions and regeneration processes in the body. It slows the synthesis of fats and stimulates muscle growth. Jintropin positively affects gland functions of the body - thymus, genital, thyroid, adrenal, etc. This drug suppresses the production of certain enzymes and stimulates insulin-like growth factor.

The yellow tops were used by GeneScience Pharmaceuticals, the makers of Jintropin. Blue tops were used by Neogenica Bioscience, the lab that made Hypertropin. A brand of injectable IGF-1, Igtropin, used green color tops. In 2007, both Jintropin and Hypertropin switched to using green color caps. Generic green Top HGH (Human Growth Hormone) available in 100iu/kit is guaranteed to be 99.2% pure growth hormone. The green cap HGH kit contains 10iu per vials with 10 vials per kit. The carton box has discreet packing and each order is delivered safe and secure from our website. IGF-1 LR3, HGH, and INSULIN QUESTIONS; Jintropin -- Supposed to have Green or Yellow Tops? Results 1 to 13 of 13 Thread: Jintropin -- Supposed to have Green or Yellow Tops? LinkBack. ... *****s a had green tops as well but it was more of a true green. 01-18-2008, 02:01 PM #3.
