Mibolerone is a 7,17-dimethylated derivative of nandrolone, meaning that a methyl group was added at the 7 and 17 positions to the base of nandrolone (1). This allows the drug to be orally active (because of the C-17 alpha alkylation). The methyl group at C-7 prevents 5-alpha reduction of the compound, meaning that the compound will not convert to weaker metabolite in androgen receptive tissues? [hop over to here](#)
