Oral Turinabol is somewhat of a unique anabolic steroid. Specifically, Oral Turinabol is a cross between Methandrostenolone and Clostebol. This provides a steroid with powerful anabolic action while at the same time minimizing androgenic characteristics. Oral Turinabol also carries somewhat of an interesting history behind it.

When Oral Turinabol is used in an anabolic steroid cycle, less than 20 mg per day will be an almost unnoticeable addition to a stack, or will be a very weak cycle if used alone. There is little point in exceeding 50 or 60 mg/day, as added anabolic effect will be small if any.
Zyia offers the Unwind Jogger in Black, Gray, Olive and Plum as well with most sizes available right now! So if you think you might like the jogger as much as I do, look into grabbing a pair ☐
