The recommended dose for the first course of Clomid 50 mg Tablets (Clomifene Citrate BP) is 50 mg (1 tablet) daily for 5 days. Therapy may be started at any . Klomen 50 mg pt (Clomid) Clomiphene Citrate. medication should not be used during pregnancy, but it is used for ovulation induction only following the onset of normal menses . Unfortunately, some women don't respond to clomiphene citrate at all. If you don't ovulate on the usual dose of clomiphene, your doctor may suggest increasing the dose over the next two months (NCCWCH 2013).If you're still not ovulating at doses of 100 mg to 150 mg a day, then you'll be termed "clomiphene resistant" (NCCWCH 2013).This can usually be identified within three ... GLYCOVEX is a nutrient partitioning agent which will allow you to come off of keto for a day or a weekend without doing as much damage to your physique. How it works is by acting similar to insulin to shuttle carbohydrates into your muscles as glycogen, rather than causing a spike to your blood sugar levels. [his response](#)

If 50 mg doesn't work, your doctor may increase the medication. Or, they may give it another try at 50 mg. You might think that more is always better, but higher doses, especially at or above 150 mg, can make conception more difficult. (See below, under side effects.)
