Dexedrine vs. Adderall: Comparing ADHD medications - Medical News Today

ADHD Stimulants vs. Non-Stimulants

Stimulants

- Increases dopamine and norepinephrine
- Boosts energy, attention and alertness
- Either amphetamine or methylphenidate based drugs
- Immediate or extended release
- Extended release is less likely to be abused

Non-stimulants

- Doesn't work as quickly as stimulants
- Different side effects than stimulants
- Less likely to be abused than stimulants
- May be able to treat ADHD as well as other conditions like a tic disorder
