HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use TRULICITY safely and effectively. See full prescribing information for TRULICITY.

TRULICITY (dulaglutide) injection, for subcutaneous use

Initial U.S. Approval: 2014

WARNING: RISK OF THYROID C-CELL TUMORS

See full prescribing information for complete boxed warning.

- **Dulaglutide causes thyroid C-cell tumors in rats. It is unknown whether TRULICITY causes thyroid C-cell tumors, including medullary thyroid carcinoma (MTC), in humans as the human relevance of dulaglutide-induced rodent thyroid C-cell tumors has not been determined (5.1, 13.1).**
- **TRULICITY is contraindicated in patients with a personal or family history of MTC and in patients with Multiple Endocrine Neoplasia syndrome type 2 (MEN 2). Counsel patients regarding the potential risk of MTC and symptoms of thyroid tumors (4, 5.1).**

RECENT MAJOR CHANGES

INDICATIONS AND USAGE	
Limitations of Use (1.1)	01/2017
WARNINGS AND PRECAUTIONS	
Hypersensitivity Reactions (5.4)	08/2017

INDICATIONS AND USAGE

TRULICITY® is a glucagon-like peptide 1 (GLP-1) receptor agonist indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

Limitations of Use:

- Not recommended as first-line therapy for patients inadequately controlled on diet and exercise (1.1, 5.1).
- Has not been studied in patients with a history of pancreatitis. Consider another antidiabetic therapy (1, 5.2).
- Not for treatment of type 1 diabetes mellitus or diabetic ketoacidosis.
- Not for patients with pre-existing severe gastrointestinal disease.

DOSAGE AND ADMINISTRATION

- Administer once weekly at any time of day (2.1).
- Inject subcutaneously in the abdomen, thigh, or upper arm (2.1).
- Initiate at 0.75 mg subcutaneously once weekly. Dose can be increased to 1.5 mg once weekly for additional glycemic control (2.1).
- If a dose is missed administer within 3 days of missed dose (2.1).

DOSAGE FORMS AND STRENGTHS

- Injection: 0.75 mg/0.5 mL solution in a single-dose pen (3)
- Injection: 1.5 mg/0.5 mL solution in a single-dose pen (3)
- Injection: 0.75 mg/0.5 mL solution in a single-dose prefilled syringe (3)
- Injection: 1.5 mg/0.5 mL solution in a single-dose prefilled syringe (3)

CONTRAINDICATIONS

- TRULICITY is contraindicated in patients with a personal or family history of medullary thyroid carcinoma or in patients with Multiple Endocrine Neoplasia syndrome type 2 (4, 5.1).
- TRULICITY is contraindicated in patients with a prior serious hypersensitivity reaction to TRULICITY or any of the product components (4, 5.4).

WARNINGS AND PRECAUTIONS

- *Thyroid C-cell Tumors:* See Boxed Warning (5.1).
- *Pancreatitis:* Has been reported in clinical trials. Discontinue promptly if pancreatitis is suspected. Do not restart if pancreatitis is confirmed. Consider other antidiabetic therapies in patients with history of pancreatitis (5.2).
- *Hypoglycemia:* When TRULICITY is used with an insulin secretagogue (e.g., a sulfonylurea) or insulin, consider lowering the dose of the sulfonylurea or insulin to reduce the risk of hypoglycemia (5.3).
- *Hypersensitivity Reactions:* Serious hypersensitivity reactions (e.g., anaphylactic reactions and angioedema) have occurred. Discontinue TRULICITY and promptly seek medical advice (5.4).
- *Renal Impairment:* Monitor renal function in patients with renal impairment reporting severe adverse gastrointestinal reactions (5.5).
- *Severe Gastrointestinal Disease:* Use may be associated with gastrointestinal adverse reactions, sometimes severe. Has not been studied in patients with severe gastrointestinal disease and is not recommended in these patients (5.6).
- *Macrovascular outcomes:* There have been no studies establishing conclusive evidence of macrovascular risk reduction with TRULICITY (5.7).

ADVERSE REACTIONS

The most common adverse reactions, reported in ≥5% of patients treated with TRULICITY are: nausea, diarrhea, vomiting, abdominal pain, and decreased appetite (6.1).

To report SUSPECTED ADVERSE REACTIONS, contact Eli Lilly and Company at 1-800-LillyRx (1-800-545-5979) or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

DRUG INTERACTIONS

Dulaglutide slows gastric emptying and may impact absorption of concomitantly administered oral medications (7.1, 12.3).

USE IN SPECIFIC POPULATIONS

- Pregnancy: TRULICITY should be used during pregnancy only if the potential benefit justifies the potential risk to fetus (8.1).
- Renal Impairment: No dosage adjustment recommended. Monitor renal function in patients with renal impairment reporting severe adverse gastrointestinal reactions (5.5, 8.7).

See 17 for PATIENT COUNSELING INFORMATION and FDA-approved Medication Guide.

CRS Report for Congress

Food and Drug Administration (FDA): Overview and Issues

Erin D. Williams
Specialist in Public Health and Bioethics
Domestic Social Policy Division

Summary

The Food and Drug Administration (FDA) is the agency within the Department of Health and Human Services (HHS) that regulates human and animal drugs, medical devices, biologics, and most foods. This report describes FDA, surveys agency-related issues Congress faces, and cites CRS reports where readers can find more information.

FDA Overview

FDA is an agency within HHS that regulates a wide range of products valued at more than $1 trillion. (See **Table 1**.) The agency is responsible for the *safety* of most foods (human and animal) and cosmetics, and it regulates both the *safety* and the *effectiveness* of human drugs, biologics (e.g., vaccines, blood and blood components), medical devices, and animal drugs. In many cases, its responsibilities abut those of other agencies. (See **Table 1**.) In such cases, interagency agreements may define the regulatory boundaries.

The primary law authorizing FDA activities is the Federal Food, Drug, and Cosmetic Act (FFDCA; 21 USC Chapter 9). (See **Table 2**.) FDA is also responsible for implementing provisions in other laws, most notably the Public Health Service Act (PHSA; 42 USC Chapter 6A). For example, FDA's authority to regulate most human biologics flows both from the PHSA (§351) and from the FFDCA. (See **Table 2**.)

FDA has three offices that perform agency-wide functions. The Office of the Commissioner conducts overall agency coordination. The Commissioner, FDA's top official, requires Senate confirmation. The Office of Chief Counsel handles the agency's legal needs. FDA's largest office, the Office of Regulatory Affairs (ORA), handles FDA's inspection and enforcement activities. It employs about one-third of the agency's personnel.

FDA's product-specific regulatory responsibilities are handled by five centers: the Center for Biologics Evaluation and Research, the Center for Devices and Radiological Health, the Center for Drug Evaluation and Research, the Center for Food Safety and

Ivan I (also known as Ivan Kalita) was born around 1288 to the Prince of Moscow, Daniil Aleksandrovich. He was born during a time of devastation and upheaval in Rus'. Kiev had been overtaken by the invading Mongol forces in 1240, and most of the Rus' principalities had been absorbed into the Golden Horde of the Mongol Empire by the time .
