Abstract

We reviewed the pleiotropic beneficial effects of the stable gastric pentadecapeptide BPC 157, three very recent demonstrations that may be essential in the gut-brain and brain-gut axis operation, and therapy application in the central nervous system disorders, in particular. Firstly, given in the reperfusion, BPC 157 counteracted bilateral clamping of the common carotid arteries-induced stroke, sustained brain neuronal damages were resolved in rats as well as disturbed memory, locomotion, and coordination. This therapy effect supports particular gene expression in hippocampal tissues that appeared in BPC 157-treated rats. Secondly, there are L-NG-nitro arginine methyl ester (L-NAME)- and haloperidol-induced catalepsy as well as the rat acute and chronic models of 'positive-like' schizophrenia symptoms, that BPC 157 counteracted, and resolved the complex relationship of the nitric oxide-system with amphetamine and apomorphine (dopamine agents application), MK-801 (non-competitive antagonist of the N-methyl-D-aspartate receptor) and chronic methamphetamine administration (to induce sensitivity). Thirdly, after rat spinal cord compression, there were advanced healing and functional recovery (counteracted tail paralysis). Likewise, in BPC 157 therapy, there is specific support for each of these topics: counteracted encephalopathies; alleviated vascular occlusion disturbances (stroke); counteracted dopamine disturbances (dopamine receptors blockade, receptors super sensitivity development, or receptor activation, over-release, nigrostriatal damage, vesicles depletion), and nitric oxide-system disturbances ("L-NAME non-responsive, L-arginine responsive," and "L-NAME responsive, L-arginine responsive") (schizophrenia therapy); inflammation reduction, nerve recovery in addition to alleviated hemostasis and vessels function after compression (spinal cord injury therapy). Thus, these disturbances may be all resolved within the same agent's beneficial activity, i.e., the stable gastric pentadecapeptide BPC 157.

Key Words: BPC 157; central nervous system; cytoprotection; injury; nitric oxide system; peptide; regeneration

Introduction

The pleiotropic beneficial effects of the stable gastric pentadecapeptide BPC 157 have been reported in several organ systems (Sikirić et al., 2013, 2018, 2020a, b; Seiwert et al., 2014, 2018; Kang et al., 2018; Gwyer et al., 2019; Park et al., 2020) (for an illustration; **Additional Table 1**). In this review, we focus on the effects of BPC 157 in central nervous system (CNS) pathology, with a specific focus on three very recent studies that highlight the essential role of the gut-brain axis in therapy application for CNS disorders (Perović et al., 2019; Vukojević et al., 2020; Zemba Čilić et al., 2021). Vukojević et al. (2020) examined the therapeutic effects of BPC 157 in rats subjected to stroke and hippocampal ischemia/reperfusion injuries. Zemba Čilić et al. (2021) explored how BPC 157 can prevent catalepsy induced by L-NG-nitro arginine methyl ester (L-NAME) and haloperidol and counteracts deficits in acute and chronic rat models resembling 'positive-like' schizophrenia symptoms. Finally, Perović et al. (2019) investigated the beneficial effects exerted by BPC 157 after

rat spinal cord compression, namely advanced healing and functional recovery (counteracted tail paralysis).

BPC 157 is a native gastric pentadecapeptide that is non-toxic and has profound cytoprotective activity; it has been used in ulcerative colitis and multiple sclerosis trials (Sikirić et al., 2013, 2018, 2020a, b; Seiwert et al., 2014, 2018; Kang et al., 2018; Gwyer et al., 2019; Park et al., 2020). In human gastric juice, BPC 157 is stable for more than 24 hours (Veljaca et al., 1995), and thus it has good oral bioavailability (always given alone) and beneficial effects in the entire gastrointestinal tract (Seiwert et al., 2014, 2018; Kang et al., 2018; Sikirić et al., 2018, 2020a, b; Gwyer et al., 2019; Park et al., 2020). Furthermore, there is no need for carrier(s); this is an important distinction from the other standard peptides, which are functionally dependent on the addition of carrier(s) (Seiwert et al., 2018) or are otherwise rapidly destroyed in human gastric juice (Veljaca et al., 1995). Consequently, stable BPC 157 is suggested to be a mediator of Robert's cytoprotection, which maintains the integrity of

The downside to this cycle is that it contains two of the most toxic oral steroids on the market Dec 6, 2015 · Most Popular 3 steroids to stack for 16 week cycle Sustanon dbol, and deca. This cycle should only ever be followed by the most experienced anabolic steroid users out there owing to the highly powerful nature of the stack of products .

Everything You Wanted To Know About BPC-157 | Protein Factory

Body Protection Compound 157 (BPC-157) is a peptide composed of 15 amino acids. Although the researchers who patented BPC-157 say that it was derived from a stomach protein, this claim isn't well-substantiated. [9] BPC-157 is thought to improve the repair of damaged tissues, although there is currently no human evidence to support this hypothesis.

BPC 157: How To Use It To Healing Your Body Like Wolverine.

How is Pure Peps BPC 157 administered? Pure Peps BPC 157 is typically administered through injection subcutaneously or intramuscularly. With its rising popularity among athletes and medical professionals, Pure Pep BPC 157 has become an incredible addition to any natural health routine. Pure Peps has developed a high-quality version of BPC 157.
