HGH bodybuilding dosage. The extent of boost you get from the use of human growth hormone for bodybuilding depends on knowing the right dosage to use, among other important considerations. The optimal amount of the peptide to use is put within the range of 6 to 8 International Units (IU) per day. Somatotropin (HGH 100iu ) is a solution that should be injected into the muscle or under the skin as recommended by the doctor. The vial should be shaken before opening it and if any discoloration or particles are seen in the vial then the doctor should be informed promptly about it.
