Anavar promotes an enhanced recovery and muscle volume/pumps. Anavar also stimulates and drives ATP into your muscle cells. All while increasing your muscle protein synthesis, for even more gains. Do I Need To Take A PCT? Anavar's benefits are well-known — with it having the ability to increase lean muscle mass, whilst decreasing a person's body fat percentage (at the same time). Perhaps anavar's best trait is that it's one of the safest steroids you can take. #younglivingessentialoils #health #plantlife #plantbased #essentialoils #aromatherapy #oilylife #plantbased #plantlife #oilylifestyle #hippievibes #goodvibesonly

Anavar (and all anabolic steroids) are essentially forms of exogenous testosterone, thus anavar will increase muscle mass. Due to the substitution of a carbon atom, replacing an oxygen atom in the A ring

(in the C2 position), this molecular structure makes anavar resistant to inactivation via the enzyme 3 α -hydroxysteroid dehydrogenase. Anavar was primarily used to support weight gain and muscle growth. This ability made it useful for treating people suffering from HIV and AIDS. The drug was also used as a treatment for osteoporosis and proved to be quite successful in this regard. In 1989, Searle Laboratories discontinued production of the drug.

For a man, Anavar will likely help to preserve existing muscle tissue, burn fat and boost testosterone production rather than stimulate new muscle mass growth. Women using Anavar, however, will notice losses in body fat, increases in energy and strength levels, and even increases in muscle mass. Anavar or Oxandrolone is a 17-alpha-alkylated (more on this in a bit) oral anabolic steroid that has very low androgenic side effects. It does not aromatize either which puts it into the 'low risk' category of steroids. It is generally used by women or fitness models who are looking for moderate, but aesthetic gains.

There have been several changes to this recently. It's great that HER2-directed therapies are continuously being developed, such that there are now three lines of treatment available. However, you have to have had a taxane previously, in order to be eligible for Kadcyra or Enhertu.
