Aug 16, 2017. #7. So I made minor adjustments proposed by both juicehead and Dylan: Test E - 300 mg: weeks 1-16. EQ - 800 mg: weeks 1-16. Tren E - 400 mg weeks 1-12. Mk and gw will be ran in my PCT along with clomid and nolva because this is exactly how I ran it the previous cycle and noticed that the transition was much smoother than the cycle .

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics Nichols Institute Chantilly, VA. It has not been cleared or approved by the U.S. Food and Drug Administration. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.

<b>ESTRADIOL, REBASELINE</b>				
ESTRADIOL	83	<b>HIGH</b>	< OR = 39 pg/mL	01

1 of 3

Reference range established on post-pubertal patient population. No pre-pubertal reference range established using this assay. For any patients for whom low Estradiol levels are anticipated (e.g. males, pre-pubertal children and hypogonadal/post-menopausal females), the Quest Diagnostics Nichols Institute Estradiol, Ultrasensitive, LCMSMS assay is recommended (order code 30289).

Please note: patients being treated with the drug fulvestrant (Faslodex(R)) have demonstrated significant interference in immunoassay methods for estradiol measurement. The cross reactivity could lead to falsely elevated estradiol test results leading to an inappropriate clinical assessment of estrogen status. Quest Diagnostics order code 30289-Estradiol, Ultrasensitive LC/MS/MS demonstrates negligible cross reactivity with fulvestrant.

The elevated percentage of absolute Neutrophils has not been found to be clinically significant as a sole clinical predictor of disease. See RPT include bands of blast cells. Frequency associated phlebotomy/steroids may also show increased immature granulocytes without clinical significance.

Comp. Metabolic Panel (CMP)

Current blast regimen was as follows: Test E 250 mg twice per week = 500 mg per week. Tren A 200 mg/ml @ 100 mg ED = 700 mg per week. Mast P 100 mg/ml @ 100 mg ED = 700 mg per week. Aromasin 10 mg taken every 2-3 days depending on feeling. Apparently works very well as verified by estradiol sensitive test.

## Test and Tren Cycle - Pharma / TRT - COMMUNITY - T NATION

#1 I'm about to start a tren test cycle I'm currently on 110 mgs of test a week on trt. Would this dose be good and add 200 of tren? Or would I run them higher. And should I run tren higher or test higher, I've seen alot of contradictions on this. Also would three weeks of tren ace show any results? Thank you!
