

Testosterone Cypionate 250 Mg Dawkowanie - Testosterone Cypionate: Package Insert - Drugs. com

At a dose of 200 to 250 mg, the optimal injection interval is 2 to 3 weeks, but peak and trough values are clearly higher and lower than the normal range. 129 More often, it is dosed more frequently at 50 to 100 mg once or twice a week, to avoid the high peaks and troughs. In addition, it can be dosed subcutaneously at 30 to 50 mg twice a week.

PDF HIGHLIGHTS OF PRESCRIBING INFORMATION worsening of signs and

symptoms .

HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use LICART™ safely and effectively. See full prescribing information for LICART.

LICART™ (diclofenac epolamine) topical system
Initial U.S. Approval: 1988

WARNING: RISK OF SERIOUS CARDIOVASCULAR and GASTROINTESTINAL EVENTS

See full prescribing information for complete boxed warning.

- **Nonsteroidal anti-inflammatory drugs (NSAIDs) cause an increased risk of serious cardiovascular thrombotic events, including myocardial infarction and stroke, which can be fatal. This risk may occur early in the treatment and may increase with duration of use (5.1)**
- **LICART is contraindicated in the setting of coronary artery bypass graft (CABG) surgery. (4, 5.1)**
- **NSAIDs cause an increased risk of serious gastrointestinal (GI) adverse events including bleeding, ulceration, and perforation of the stomach or intestines, which can be fatal. These events can occur at any time during use and without warning symptoms. Elderly patients and patients with a prior history of peptic ulcer disease and/or GI bleeding are at greater risk for serious GI events. (5.2)**

INDICATIONS AND USAGE

LICART contains diclofenac epolamine, which is a nonsteroidal anti-inflammatory drug (NSAID), and is indicated for the topical treatment of acute pain due to minor strains, sprains, and contusions (1)

DOSAGE AND ADMINISTRATION

- Use the lowest effective dose for shortest duration consistent with individual patient treatment goals (2.1)
- See the Full Prescribing Information for important administration instructions (2.1)
- Do not apply to damaged or non-intact skin (2.1)
- The recommended dose is one (1) LICART to the most painful area once daily (2.2)

DOSAGE FORMS AND STRENGTHS

- LICART (diclofenac epolamine) topical system 1.3% for topical use. (3)

CONTRAINDICATIONS

- Known hypersensitivity to diclofenac or any components of the drug product (4)
- History of asthma, urticaria, or allergic-type reactions after taking aspirin or other NSAIDs (4)
- In the setting of CABG surgery (4)
- For use on non-intact or damaged skin (4)

WARNINGS AND PRECAUTIONS

- **Hepatotoxicity:** Inform patients of warning signs and symptoms of hepatotoxicity. Discontinue if abnormal liver tests persist or worsen or if clinical signs and symptoms of liver disease develop (5.3)
- **Hypertension:** Patients taking some antihypertensive medications may have impaired response to these therapies when taking NSAIDs. Monitor blood pressure (5.4, 7)

- **Heart Failure and Edema:** Avoid use of LICART in patients with severe heart failure unless benefits are expected to outweigh risk of worsening heart failure (5.5)
- **Renal Toxicity:** Monitor renal function in patients with renal or hepatic impairment, heart failure, dehydration, or hypovolemia. Avoid use of LICART in patients with advanced renal disease unless benefits are expected to outweigh risk of worsening renal function (5.6)
- **Anaphylactic Reactions:** Seek emergency help if an anaphylactic reaction occurs (5.7)
- **Exacerbation of Asthma Related to Aspirin Sensitivity:** LICART is contraindicated in patients with aspirin-sensitive asthma. Monitor patients with preexisting asthma (without aspirin sensitivity) (5.8)
- **Serious Skin Reactions:** Discontinue LICART at first appearance of skin rash or other signs of hypersensitivity (5.9)
- **Premature Closure of Fetal Ductus Arteriosus:** Avoid use in pregnant women starting at 30 weeks gestation (5.10, 8.1)
- **Hematologic Toxicity:** Monitor hemoglobin or hematocrit in patients with any signs or symptoms of anemia (5.11, 7)

ADVERSE REACTIONS

Most common adverse reactions for LICART are application site pruritus and other application site reactions (6.1)

To report SUSPECTED ADVERSE REACTIONS, contact IBSA Pharma Inc. at 800-587-3513 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

DRUG INTERACTIONS

- **Drugs that Interfere with Hemostasis (e.g., warfarin, aspirin, SSRIs/SNRIs):** Monitor patients for bleeding who are concomitantly using LICART with drugs that interfere with hemostasis. Concomitant use of LICART and analgesic doses of aspirin is not generally recommended (7)
- **ACE Inhibitors, Angiotensin Receptor Blockers (ARB), or Beta-Blockers:** Concomitant use with LICART may diminish the antihypertensive effect of these drugs. Monitor blood pressure (7)
- **ACE Inhibitors and ARBs:** Concomitant use with LICART in elderly, volume depleted, or those with renal impairment may result in deterioration of renal function. In such high-risk patients, monitor for signs of worsening renal function (7)
- **Diuretics:** NSAIDs can reduce natriuretic effect of furosemide and thiazide diuretics. Monitor patients to assure diuretic efficacy including antihypertensive effects (7)
- **Digoxin:** Concomitant use with LICART may increase serum concentration and prolong half-life of digoxin. Monitor serum digoxin levels (7)

USE IN SPECIFIC POPULATIONS

- **Pregnancy:** Use of NSAIDs during the third trimester of pregnancy increases the risk of premature closure of the fetal ductus arteriosus. Avoid use of NSAIDs in pregnant women starting at 30 weeks gestation (5.10, 8.1)
- **Infertility:** NSAIDs are associated with reversible infertility. Consider withdrawal of LICART in women who have difficulties conceiving (8.3)

See 17 for PATIENT COUNSELING INFORMATION and Medication Guide.

Revised: 12/2018

Reference ID: 4366061

Key takeaways: Testosterone injections are effective medications for combatting low testosterone ("T") levels. They're a common type of testosterone replacement therapy. There are three main testosterone injections available for you to choose from: testosterone enanthate, testosterone cypionate, and testosterone undecanoate.
