

# Deca Durabolin Injection 400 Mg Anabolic Steroids 2021 | Dr. Gaddison

**BUY ANABOLICS ONLINE:** <https://t.co/ckhdJN9d6W>

The cycle lasts for 12 weeks in the following progression: Weeks 1 to 6, you should take 500mg of Testosterone enanthate and 400mg of Deca (both per week). This is to be combined with 30mg/ed of Dianabol and .5mg/eod of Arimidex to maintain natural testosterone production. Deca Durabolin is a well-tolerated anabolic steroid which means that you can even increase the dose without too many side effects, barring Deca-Dick. (More on this in a bit) For a bulking cycle, 400-500mg/week of Deca is the gold standard. If you hate pinning, you can use just one injection in a week. Moderate cycles involve stacking - combining Deca-Durabolin with other drugs, which typically lasts for 12 weeks. For the first six weeks, you should take Deca-Durabolin 400 mg per week and testosterone enanthate 500 mg per week. The very first medical prescription guidelines for Deca Durabolin dosages was that of 50 - 100mg administered every 3 - 4 weeks for a total of 12 weeks. Different medical conditions have called for different prescription guideline of Deca-Durabolin doses.
