

# Is human growth hormone dangerous to take?

## What are the risks of taking HGH?

What are the risks of HGH treatment?

- Carpal tunnel syndrome.
- Increased insulin resistance.
- Type 2 diabetes.
- Swelling in the arms and legs (edema)
- Joint and muscle pain.
- For men, enlargement of breast tissue (gynecomastia)
- Increased risk of certain cancers.

## Is Human Growth Hormone therapy safe?

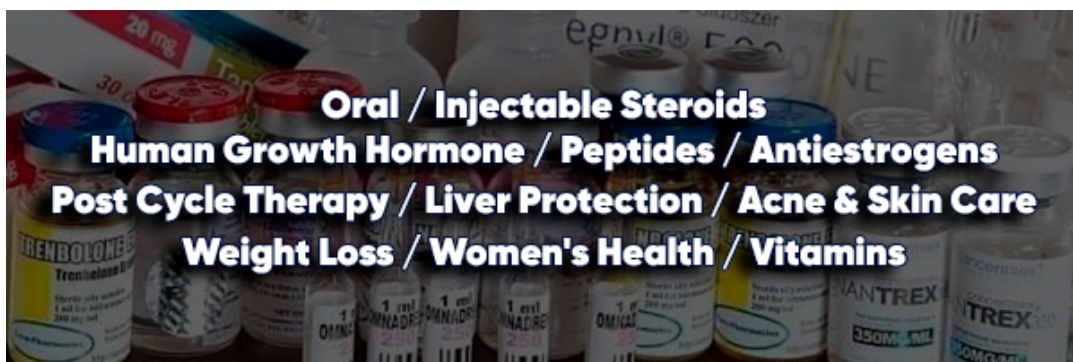

GH treatment is a **safe**, effective way to treat growth hormone deficiency, Turner Syndrome, and a few other conditions associated with short stature.

## What happens if you take growth hormone?

Long-term use of HGH injections can cause a condition called **acromegaly**. Adults cannot grow taller by using the synthetic growth hormone. High doses will thicken the person's bones instead of lengthening them. People with acromegaly will experience an overgrowth of bones, particularly in the hands, feet, and face.

## Does HGH shorten your life?

Other research has shown that people with low levels of HGH due to surgical or radiation damage to the pituitary gland that makes HGH have **increased risk of cardiovascular disease**, a factor that can shorten life span.

## Does HGH damage your liver?

**HGH prompts the liver and other organs to make IGF-1**, which affects many tissues and organs in the body. Studies usually measure IGF-1 rather than growth hormone directly because IGF-1 levels remain more constant.

## Is HGH safe for females?

-HGH helps to control and maintain cholesterol and blood sugar levels. HGH replacement therapy for women promotes a natural balance to your body. **The supplements are safe** and have a multitude of benefits.

## Who should not take Serovital?

If you or someone you know is **under the age of 18**, we cannot recommend taking the product, as it was tested only on and intended for use by healthy individuals over the age of 18.

## Can HGH make you taller at 21?

Adults that want to gain height cannot use Adult HGH Therapy in Hollywood to **help stimulate their bones to lengthen**. This is due to the fact that after puberty our growth plates begin to fuse with the bones they are associated with.

## Can HGH make you taller at 19?

Human growth hormone, or HGH as it is commonly called, is a hormone that is naturally produced within the brain's pituitary gland. Therefore, simply utilizing **HGH to help adults grow taller after the age of 18 is not going to work in most cases**.

## How fast do you feel the effects of HGH?

Expected Results with Six Months of HGH Peptide Therapy

While patients will notice some significant increases changes in the body after the first month, the full-benefits are usually fully noticed after **three to six months of therapy**.
