Masteron Enanthate is a good choice for the athlete looking for a boost in strength and more so than often given credit for. Most steroid users only use Masteron when cutting, when calories are low and strength is necessarily diminished. But for an athlete looking for a boost in strength with little to no weight gain, this can be a solid choice.

By squeezing your triceps at the end of the movement, you are ensuring that your biceps are completely lengthened, allowing greatest RANGE OF MOTION which means greatest MUSCLE TISSUE BREAKDOWN which also means greatest BICEPS GAINS!

Masteron enanthate (Drostanolone) is a dihydrotestosterone (DHT) derivative that is altered by the addition of a methyl group at the carbon 2 position to increase its anabolic effects. It is a very popular anabolic steroid due to it displaying moderate anabolic and low androgenic characteristics.

□What I have here is an example of a current split that I've been using for a few years. This is a upper strength and hypertrophy breakdown that is similar to the one I'm using today, I may change a few machines are arm exercises here and there but for the most part it stays the same.

Masteron Enanthate, which should be more properly known as Drostanolone Enanthate, is a long estered variant of Drostanolone. Drostanolone was originally marketed on the prescription drug market under the brand name Masteron, which was Drostanolone Propionate (a short estered variant of Drostanolone).

I want you to understand that in order to build, maintain and sustain muscle we must give it a reason to stay or grow. That's the nature of a lifter's career, every heard the term "use it or lose it"? That is exactly what we are doing here. The training that built your body will be the training that you will use in order to lean down. I recommend that you stick to compound movements as the main focus along with training in both rep ranges of hypertrophy and strength.
