Lokar Shifter Knob Removal Instructions (For Shifters Manufactured 1993 and Later)

For shifters manufactured 1994 and earlier, please contact Lokar for assistance.

To Remove Shifter Knob

Step 1: Make sure shifter is all the way forward in the Park position.
Step 2: Loosen the jam nut below the shifter knob. **DO NOT** loosen or remove the set screw that is in the knob. Fig. 12.
Step 3: Turn the shifter knob counter-clockwise to remove.

To Install Shifter Knob

Step 1: Make sure the jam nut is off in place on the shifter lever.
Step 2: Screw the shifter knob onto the shifter lever until the release button comes in flush with the top of the shifter knob.
Step 3: Tighten the jam nut up against the bottom of the shifter knob.
Step 4: Check to make sure that depressing the release button allows the shifter lever to be moved, and that the shifter lever will lock in Park and Neutral. If the shifter will not come out of "PARK" with the release button fully depressed, tighten the knob one turn and check it again. If the shifter does not lock in "PARK", loosen the knob one turn and check it again.

Lever Ford Shift C6

Neutral Safety Switch Adjustment and Wiring

Step 12 For the neutral safety switch to function properly, the shifter linkage must be adjusted correctly. Do not attempt to adjust the neutral safety switch unless you have completed Step 11.

The Lever neutral safety switch is a simple on/off, non-directional switch. The switch passes current from the battery to the starter. It does not pass current from the battery to the starter when the shift is in Park or Reverse.

Double check to make sure that the balls in the switch, current holes in the left side of the floor mount mounting bracket are tight.

Step 13 Remove the neutral safety switch and washer (Fig. 9) from the right side of the shifter using a 7/8\"/>

Step 14 Loosen, but do not remove, the two 5/16\"/>

WARNING: Before taking the shifter out of Park, be sure that the vehicle's tires are blocked and the parking brake is set to avoid movement of the vehicle.

Step 15 Put the shifter into the Reverse position. Reposition the switch plate so that the hole in the switch plate lines up with the center groove in the shifter body (Fig. 10). Screw the provided aluminum adjusting plate into the neutral safety switch opening. Tighten the switch plate tightly forward and back while you are screwing in the aluminum adjusting plate. It will help get the shifter body centered on the adjusting plate (Fig. 11).

Step 16 Tighten the two 5/16\"/>

Step 17 Remove the aluminum adjusting plate, and install the neutral safety switch and washer onto the shifter. Test by continuously connecting an ohmmeter lead to each end of the neutral safety switch. When adjusted correctly you will only have continuity between the two switch studs when the shifter is in Park or Neutral. Continuity in any other gear requires readjustment of the neutral safety switch in the forward slot.

Step 18 Connect the neutral safety switch between your ignition switch and starter circuit. Check the wiring of your fuse panel.

- **If there are 12V connections to a neutral safety switch**, use a #12 (or heavier) stranded wire from these terminals in your fuse panel to the 12V terminals on the neutral safety switch. That completes the Neutral Safety Switch wiring.
- **If your fuse panel does not have neutral safety switch connections**, locate the wire going from the ignition switch to the starter. If that wire is not used, this wire will usually be purple. After locating the wire, disconnect it from the starter. It must be cut and routed from the ignition switch to one of the neutral safety switch terminals, and from the other neutral safety switch terminal to the same stud as the starter where the original wire was removed. If the wire must be lengthened, be sure to use wire that is at least the same size or larger than the original.

Step 19 Reconnect the negative battery cable and check operation. Make sure that the engine will not start in Reverse or a other gear. If it does, follow the neutral safety switch adjustment procedure again. If your car should ever start in any gear other than Park or Neutral, please readjust the neutral safety switch accordingly. Tighten all brackets and bolts correctly and securely and then should be re-tightened or readjustment. If you have any questions after following the procedure, please call Lokar Technical Support.

Step 20 Once the installation is completely finished and the neutral safety switch is adjusted, remove each of the 5/16\"/>

Lokar Shifter Knob Removal Instructions
(For Shifters Manufactured 1995 and Later)

For shifters manufactured 1994 and earlier, please contact Lokar for assistance.

To Remove Shifter Knob

Step 1: Make sure shifter is all the way forward in the Park position.

Step 2: Loosen the jam nut below the shifter knob. **DO NOT** remove or remove the set screw that is in the knob. **Fig. 14**

Step 3: Turn the shifter knob clockwise to remove.

To Install Shifter Knob

Step 1: Make sure the jam nut is set in place on the shifter lever.

Step 2: Screw the shifter knob onto the shifter lever until the release button comes up flush with the top of the shifter knob.

Step 3: Tighten the jam nut up against the bottom of the shifter knob.

Step 4: Check to make sure that depressing the release button allows the shifter lever to be moved, and that the shifter lever will lock in Park and Neutral. If the shifter will not come out of "PARK" with the release button fully depressed, tighten the knob set screw and check it again. If the shifter does not lock in "PARK", loosen the knob set screw and check it again.
