Here, we list all of the prizes that have been awarded to Sensi Seeds as a company over the decades of cannabis cups: 2017 Spannabis Barcelona: Sensi Seeds wins Best Seed Bank; 2017 Expogrow Irun, Spain: Sensi Seeds wins Best Seed Bank; 2015 Expogrow Irun, Spain: Sensi Seeds wins Best Seed Bank; 2014 High Times Cannabis Cup: Sensi Seeds wins Best

## Welke Cannabis Cups en prijzen heeft Sensi Seeds gewonnen?

Sensi Seeds heeft aan bijna elke cannabiscompetitie in Europa deelgenomen (en ook aan een aantal wedstrijden over de hele wereld) sinds het concept in de vroege jaren 80 werd. Sensi Seeds neemt deel aan de High Times Cannabis Cup, de Highlife Cup, de Spaanse cups, tentoonstellingen en nog veel

## **Best Seed Banks to Buy Cannabis Seeds Online in USA**

Buyers get 2 free feminized seeds with every order, 2 free auto-flowering seeds for orders over \$75, and 4 feminized / 3 auto flower seeds for free when spending over \$

## ¿Qué premios y Cannabis Cups ha ganado Sensi Seeds?

Sensi Seeds se enorgullece de haber ganado los siguientes premios en la categoría de stands a lo largo de los años: 2018 Expogrow: Sensi Seeds gana el premio al Mejor 2004 Cannabis Cup: Sensi Seeds obtiene el 3 er puesto en la categoría Expo 2003 Cannabis Cup: Sensi Seeds obtiene el 1 er puesto en la categoría Expo

## Buy Feminised Cannabis Seeds | Seed City Feminized Pot Seeds

Before using feminised seeds became commonplace, it was normal for growers to simply plant double the amount of plants in order to make up for the 50% chance of ending up with males. This seems like an enormous amount of effort and resources for little to none. In simple terms, it isn't.

### Physicochemical, Phytochemical and Nutritional Impact of Fortified Cereal Based Extrudate Snacks: Effect of Jackfruit Seed Flour Addition and Extrusion Cooking

Yogesh Gat and Laxmi Ananthanarayan

Department of Food Engineering and Technology, Institute of Chemical Technology, Matunga, Mumbai-400019, India

**Abstract:** Aim of present study was to estimate quantitative changes in nutritional, physicochemical and phytochemical properties of rice-jackfruit seed flour blend extrudates. Rice-jackfruit seed flour blend was prepared at 70:30 proportions and was subjected to extrusion cooking. Effect of barrel temperature (140-180°C) and screw speed (100-300 rpm) on nutritional, physicochemical (expansion, density, WSI, WAI and hardness) and phytochemical (TPC and TFC) properties were studied. Rice flour extrudate was found to have 6.63% protein and 0.17% fiber which were further increased to about 8.44 and 0.8%, respectively after addition of jackfruit seed flour at 180°C with 300 rpm. Extrusion cooking at lower barrel temperature resulted in increase in TPC and TFC. Rice-jackfruit seed flour blend extrudate at 180°C with 100 rpm resulted in highest antioxidant capacity and reducing power (208.56 µmol of TE/g and 0.26 mg of AAE/g of dry powder respectively). Practical applications: Although there is increased use of extrusion processing, but still there is no fully developed theory to predict the effects of process variables on various raw materials and their mixtures. Any change in feed composition and process variables can influence extrusion performance as well as product quality. Therefore, it is crucial to study the effect of extrusion process parameters (barrel temperature and screw speed) on extrudate characteristics. Also, the researchers, so far, tried lots of combinations for nutraceutical enrichment of extrudate snacks. To the best of our knowledge, this is first report on extrusion cooking of RF fortified with JFSF. In future, this data could be useful for food processing industries. Originality of this study demonstrates the feasibility of developing value added extrudates with improved nutritional and nutraceutical appeal. Present study shows potential for utilization of jackfruit seed which is part of the waste generated in large quantities when the fruit is processed or consumed.

**Keywords:** Extrudate characteristics, extrusion, jackfruit seed flour, nutritional analysis, phenolic content

#### INTRODUCTION

Extrusion cooking technology plays a key role in many food processing industries as a continuous cooking, mixing, shearing and forming process. It is used especially for production of cereal-based snacks. Extrusion cooking is very efficient technology having advantage of low cost, High Temperature Short Time (HTST) process and a versatile nature (Harper, 1981). Consumer preference of extruded foods is mainly due to convenience, attractive appearance and texture. Rice provides all the features for production of highly acceptable extruded snack foods, but its nutritional value is far from satisfying the needs of health-conscious consumers.

Several attempts have been made to improve the nutritional profile of RF extrudate (Camire, 2000). Among other materials, incorporation of fruit or vegetable waste has been shown to cause a positive impact on levels of proteins and dietary fiber of cereal-based extruded snacks (Grigelmo-Miguel and Martin-Belloso, 1999; Nawirska and Kwasniewska, 2005).

Nutritional and economical aspects of JFSF appears to be promising in production of extruded snacks for fortifying RF. High in protein and low in fat, JFSF consumption has been associated with reduced risk of coronary diseases. In addition, there is solid scientific evidence that JFSF possess phenolic compounds such as flavonoids and phenolic acids which exhibit strong antioxidant capacity (Soong and Barlow, 2004). Consequently, fortification of RF with JFSF is believed to promote the utilization of JFSF for food use as a result in product with high nutritional and nutraceutical appeal.

Consumption of cereal-based snacks as breakfast cereal is increasing mainly by child population. Therefore, any attempt to enhancement protein and fiber content is highly convenient. In addition, the supplementation of RF with JFSF can have positive impact not only in health aspect but also sustainability. The researchers, so far, tried lots of combinations for nutraceutical enrichment of extrudate snacks. To the best of our knowledge, this is first report on extrusion cooking of RF fortified with JFSF. In future, this data
