Technical Note

Dimethylamylamine: A Drug Causing Positive Immunoassay Results for Amphetamines*

Shawn P. Vorce[†], Justin M. Holler, Brian M. Cawrse, and Joseph Magluilo, Jr.

Division of Forensic Toxicology, Armed Forces Medical Examiner System, Armed Forces Institute of Pathology, 1413 Research Boulevard, Building 102, Rockville, Maryland 20850

Abstract

The Department of Defense (DoD) operates six forensic urine drug-testing laboratories that screen close to 5 million urine samples for amphetamines yearly. Recently, the DoD laboratories have observed a significant decrease in the confirmation rates for amphetamines because of specimens screening positive by two separate immunoassays and confirming negative by gas chromatography–mass spectrometry (GC–MS). Previous studies conducted by the Division of Forensic Toxicology, Armed Force Institute of Pathology (AFIP) utilizing a GC–MS basic drug screen and a designer drug screen revealed no common compound or compound classes as to the cause of the immunoassay-positive results. Additional information obtained from an immunoassay vendor suggested the anorectic compound dimethylamylamine (DMAA) may be the cause of the false-positive screens. An additional 134 false-positive samples were received and analyzed using liquid chromatography–tandem mass spectrometry (LC–MS–MS) for DMAA. LC–MS–MS analysis revealed the presence of DMAA in 92.3% of the false-positive samples at a concentration of approximately 6.0 mg/L DMAA, causing a positive screen on both immunoassay kits.

Introduction

Dimethylamylamine (DMAA) is a straight chain aliphatic amine (Figure 1) found naturally in geranium flowers. It is also referred to as forthane, methylhexanamine, 1,3-dimethylpentylamine, and geranamine. DMAA was originally used as a nasal decongestant for its vasoconstrictor action on the nasal mucosa (1). Today, it can be found in nutritional and body-building energy supplements such as Jack3d™ and OxyELITE Pro™ that are available online and at health supplement suppliers such as General Nutrition Center (GNC). One manufacturer refers to DMAA as being a low-side-effect alternative to

ephedrine (2). The nutritional supplements may list DMAA in the ingredients as any of the previously mentioned names, or as geranium oil extract, or as a “proprietary blend”. DMAA is available in over-the-counter party pills sold in New Zealand, and in November 2009, the government moved to restrict sales of those pills. Their use as a drug of abuse became prevalent in New Zealand after 1-benzylpiperazine (BZP) became a scheduled drug (3).

The Department of Defense (DoD) currently employs a three test system to report a positive result for a urine specimen. The tests are composed of two qualitative immunoassays and one confirmatory test, usually gas chromatography–mass spectrometry (GC–MS). For the amphetamines class, the DoD uses two different immunoassay reagents to improve selectivity and decrease over-the-counter medication positives from being ex-

It is banned but they only care if you pop hot for stuff like amphetamines. Also they only do the confirmation test if you pop hot on the initial, which can be a 50/50. They're pretty weird about it tbh, only reason why DMAA/DMHA got banned was because of the deaths that happened back when Jack3d and craze was popular.

DoD Implements Expanded Drug Testing for Military Applicants

October 2, 2023 Drug testing is an annual requirement for US service members Undergoing a military drug test is something every recruit goes through in MEPS (Military Entrance Processing Stations). But what they may not know is that they'll be tested for substances - both legal and illegal - for the rest of their time in the military.

Will Dmha Fail A Military Drug Test? - TheFitnessFAQ

I only know of one person who has failed a drug test from 2-amino. He was taking Lipodrene for about two months, 2 pills per day. He tested positive for amphetamines. His job sent the bottle in for additional testing and required him to print proof of his purchase. Again, I do not know many people who consume dmha on the regular or even once a .

PDF DOD INSTRUCTION 1010 - Executive Services Directorate

Department of Defense INSTRUCTION

NUMBER 1010.16
October 03, 2012

USDP&R

SUBJECT: Technical Procedures for the Military Personnel Drug Abuse Testing Program (MPDATP)

References: See Enclosure 1

1. **PURPOSE.** This instruction:

- a. Pursuant to DoD Directive (DoDD) 5124.02 (Reference (a)) revises DoD Instruction (DoDI) 1010.16 (Reference (b)) to update the policies, requirements and procedures for the MPDATP pursuant to DoDI 1010.01 (Reference (c)).
- b. Incorporates and cancels Standard Operating Procedures Manual (Reference (d)).
- c. Promotes standardization and joint service operations among all Service Forensic Toxicology Drug Testing Laboratories (FTDTL).

2. **APPLICABILITY.** This instruction:

- a. Applies to:
 - (1) OSD, the Military Departments (including the Coast Guard when operating as a service in the Navy), the Office of the Chairman of the Joint Chiefs of Staff and the Joint Staff, the Combatant Commands, the Office of the Inspector General of the Department of Defense, the Defense Agencies, the DoD Field Activities, and all other organizational entities within the DoD (hereinafter referred to collectively as the "DoD Component"). The term "Military Services" as used herein, refers to the Army, Navy, Air Force, Marine Corps, Active and Reserve Components.
 - (2) Tests conducted under the MPDATP on specimens received by the military FTDTLs.
 - (3) Foreign nationals employed by DoD or attending U.S. military training schools only as authorized by intergovernmental agreements negotiated on a country-by-country basis.

Drug testing for all applicants for military service is expanding to include the same 26-drug panel used for active military members, the Defense Department's director of drug testing and program .
