# Acne - Diagnosis and treatment - Mayo Clinic

Differential Diagnosis of Acne Vulgaris	
Diagnosis	Distinguishing characteristics
Acne cosmetica	Associated with use of heavy oil-based hair products and cosmetics and resolves with discontinuation of these products
Drug-induced acne	Monomorphic lesions and history of medication use (gluco- corticoids, lithium, oral contraceptives, phenytoin [Dilantin], isoniazid, androgens)
Folliculitis	Monomorphic lesions, abrupt onset and variable distribution with absence of comedones, spreads with scratching or shaving
Hidradenitis suppurativa	Double-headed comedones (two pustules), inflamed nodules with abscesses, predilection for intertriginous areas, sinus tracts
Miliaria	Nonfollicular papules, pustules, and vesicles; occurs in response to heat or exertion
Perioral dermatitis	Papules, pustules, and erythema confined to the chin and nasolabial folds with sparing of the area directly adjacent to the vermilion border
Pseudofollic- ulitis barbae	Occurs in bearded areas with short, curly hair that is shaved closely
Rosacea	Erythema and telangiectasia, absence of comedones
Seborrheic dermatitis	Greasy scales with yellow-red, coalescing macules and papules

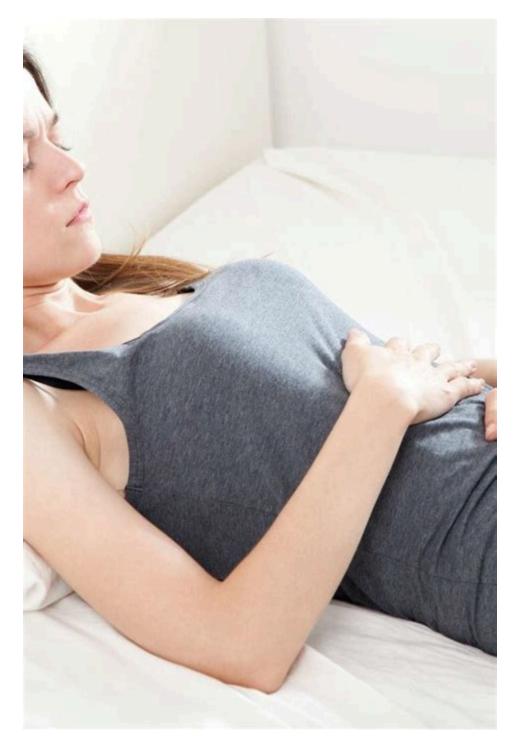

Human chorionic gonadotropin is a hormone produced primarily by syncytiotrophoblastic cells of the placenta during pregnancy. The hormone stimulates the corpus luteum to produce progesterone to maintain the pregnancy. Smaller amounts of hCG are also produced in the pituitary gland, the liver, and the colon. [1]

# DPO symptoms: What to expect in the 2-week wait - Medical News Today

How HCG works. HCG is a hormone naturally produced by body during pregnancy. It's also very similar to luteinizing hormone (LH), a hormone involved in reproduction in males and females. In female infertility, HCG is used (along with other medications) to promote ovulation. This can help raise the chance of getting pregnant. In males, HCG causes the production of hormones called androgens (e. g.

#### **Pregnancy acne: Causes and treatment | BabyCenter**

HCG is a hormone almost ex clusively produced during pregnancy, and plays an important role in sustaining an embryo until the placenta is formed. At-home pregnancy tests work by detecting hCG in the urine. HCG is produced in very minimal quantities in non-pregnant women and men and does not appear to play an appreciable role in body functions.
