Equipose (Boldenone Undecylenate) is a structurally altered form of testosterone. It is a very slight change in an added double bond at the carbon one and two position. This double bond greatly reduces the hormone's androgenicity, as well as estrogenic nature. Metamizole, or dipyrone, is a painkiller, spasm reliever, and fever reliever that also has anti-inflammatory effects. It is most commonly given by mouth or by injection. Although it is available over-the-counter in some countries, it is banned in others, due to its potential for adverse events, including agranulocytosis. A study by one of the manufacturers of the drug found the risk of.
