La corona protesica e un manufatto protesico dentale, a forma di guscio, che riveste un dente, dopo che questo e stato opportunamente preparato" (limato), per garantirgli una maggiore resistenza ai carichi masticatori. I denti che vengono protesizzati sono solitamente indeboliti da grandi carie o devitalizzazioni, oppure sono necessari come pilastri di un ponte. La preparazione del dente consiste nel rimuovere, limando con strumenti specifici, gli strati piu esterni del dente, per uno spessore pari a quello che avra la corona protesica. .
