

It is a very effective anabolic steroid, increasing muscle mass and strength by up to 20%. Winstrol is not aromatized, so it does not produce estrogen levels in the body that can lead to gynecomastia (enlargement of male breast tissue). It is relatively safe when used according to prescription guidelines. There are no known harmful side effects .

DOI: 10.3892/br.2016.794

**Abstract.** Stanozolol is a synthetic heterocyclic steroid with anabolic and androgenic properties, which has been abused by several high-profile professional athletes. Stanozolol is also used in veterinary medicine to increase appetite, cause weight gain and treat certain types of anemia. The detection of stanozolol metabolites in human urine for doping control purposes depends on the analytical method applied. The most commonly applied methods in the World Anti-Doping Agency (WADA)-accredited doping control laboratories are gas chromatography/high-resolution mass spectrometry (GC/HRMS) or gas chromatography-mass spectrometry (GC/MS/MS). Recently, a new method has been published and validated that makes the detection of 3'-hydroxystanozolol glucuronide in urine possible in a concentration >50-fold less compared to the above-mentioned commonly used methods. It is common practice to administer breeding animals with steroid hormones in order to enhance their growth. Athletes who consume meat containing such hormone residues may be at risk of failing a sports drug test. A randomized study in the general population consuming meat should be conducted, monitoring the levels of 3'-OH-stanozolol glucuronide in human urine, in order to determine the threshold levels of passive exposure, if any, and therefore guarantee that any adverse analytical findings reported in the urine of athlete at a pg level correspond to stanozolol abuse for enhancing performance.

### Introduction

Stanozolol is a synthetic heterocyclic steroid with anabolic and androgenic properties, which has been abused by several high-profile professional athletes, and is also used in veterinary

medicine to increase appetite, cause weight gain and treat certain types of anemia. Chemically, it is a derivative of dihydrotestosterone (DHT), and it contains a 3-2 pyrazol group attached to the first cycloalkane ring (known as the A-ring) of the anabolic steroid structure. The attachment of the pyrazol group to the A-ring actually replaces the 3-keto group that normally sits in the same location.

Stanozolol undergoes a rapid metabolism, leading to low concentration levels of the parent compound in urine, with the level of the urinary excretion also being low enough, i.e., 3-5% out of the total administered amount. Stanozolol is mainly excreted as hydroxylated metabolites, which are detectable at low ng/ml levels up to 3-4 days following the cessation of administration (single-dose administration). The maximum excretion rate of its monohydroxylated metabolites can be detected between 8 and 17 h following oral administration, depending on the applied dose. The most abundant metabolites identified in the human urine are 16 $\beta$ -hydroxystanozolol, 3'-hydroxystanozolol and 4 $\beta$ -hydroxystanozolol (1-3).

The detection of stanozolol metabolites in human urine for doping control purposes depends on the analytical method applied. The most commonly applied methods in the World Anti-Doping Agency (WADA)-accredited doping control laboratories are gas chromatography/high-resolution mass spectrometry (GC/HRMS) or gas chromatography-mass spectrometry (GC/MS/MS). In the WADA technical document TD2015MRPL, the minimum required performance level (MRPL) for 3'-hydroxystanozolol is set at 2 ng/ml, taking into consideration the metabolism, stability, pharmacokinetics and pharmacodynamics of stanozolol. This means that in order for a WADA-accredited laboratory to effectively perform its tasks, 3'-hydroxystanozolol has to be detected at concentrations of  $\leq 2$  ng/ml, as this is the area of concentrations in the urine samples of athletes that stanozolol metabolites vary, when stanozolol is administered to enhance performance with its long-lasting doping effect.

### Current developments

Recently, a new method has been published and validated that makes the detection of 3'-hydroxystanozolol glucuronide in

Each steroid has a different detection time in which the drug will show up on a drug test. Here is a list of steroid detection times.

## Winstrol Benefits Vs Side Effects (Worth the Risk?)

Patients, however, are placed on the lowest possible effective dose, which is indicative of Winstrol's toxic nature. Contents [ hide] 1 Winstrol Benefits. 1. 1 Muscle Gain. 1. 2 Fat Loss. 1. 3 No Water Retention. 1. 4 Enhances Endurance. 1. 5 Increases Strength. 2 Winstrol Side Effects.

### Urine drug tests: Uses, procedure, detection times, and results

In a blood test, Winstrol can be detected for up to 9 weeks after the last dose. Several factors need to be considered to determine the length of time a drug or substance can be detected in the urine. Here are the most common opiates and the detection period for urine testing: codeine: up to 3 days. mesterolone.

## Steroid Detection Times - Oral & Injectable Steroids, PED Testing

**Drug Test Detection Times**

		SALIVA		URINE		HAIR	
		Appears Within	Disappears After	Appears Within	Disappears After	Appears Within	Test Cutoff*
Amphetamine	AMP	5-10 min	1-3 days	2-5 hours	1-4 days	5-7 days	90 days
Methamphetamine	mAMP	5-10 min	1-3 days	2-5 hours	3-5 days	5-7 days	90 days
Cocaine	COC	5-10 min	1-3 days	2-5 hours	1-3 days	5-7 days	90 days
Opiates	OPI	5-10 min	1-2 days	2-5 hours	2-4 days	5-7 days	90 days
Marijuana	THC	5-10 min	6-24 hours	2-5 hours	3-30 days	5-7 days	90 days
Phencyclidine	PCP	-	-	2-5 hours	7-14 days	5-7 days	90 days
Oxycodone	OXY	5-10 min	1-2 days	2-5 hours	2-4 days	5-7 days	90 days
Ecstasy	MDMA	-	-	2-5 hours	1-3 days	5-7 days	90 days
Benzodiazepines	BZO	5-10 min	1-3 days	2-5 hours	3-7 days	5-7 days	90 days
Buprenorphine	BUP	5-10 min	1-3 days	2-5 hours	1-3 days	5-7 days	90 days
Barbiturates	BAR	-	-	2-5 hours	4-7 days	5-7 days	90 days
Methadone	MTD	5-10 min	1-3 days	2-5 hours	3-5 days	5-7 days	90 days
Fentanyl	FTY	-	-	1-4 hours	1-3 days	5-7 days	90 days
Tramadol	TRA	-	-	8-12 hours	3-7 days	5-7 days	90 days

Detection times will vary based on a number of factors including frequency of use, route of administration, body mass, and age.

Information on urine and saliva detection times provided by Alere Technologies.

Information on hair detection times for the consumer market provided by Confirm Biosciences.

\*Hair Test Cutoff - 90 days is the standard cutoff with hair from the head in the consumer market and for many businesses employing hair drug testing as a testing method. However, drugs do remain in the hair beyond 90 days and hair analysis can go back beyond even a year in workplace and legal situations. It should also be noted that hair from the body has a different detection period than hair from the head. Body hair grows more slowly so drugs will not appear in the hair as quickly. An inch and a half of body hair generally represents a period of 6 months to a year.

A urine drug test can detect both illegal and prescription drugs in a person's system. Doctors, sports officials, and many employers require these tests regularly. Urine tests are quick, easy .

What's In Your Supplements ?

The image displays three bottles of supplements from Muscle Labs. From left to right: a white bottle of WINDROL-V™ (Maximum Strength Anabolic Fat Burner), a brown bottle of Winstrol® (Stanozolol 25mg), and a white bottle of WINIDROL™ (Stanozolol Alternative). To the right of the bottles is a muscular man in a blue tank top and shorts, holding two black dumbbells. The background features the Muscle Labs logo and a box of Winstrol.

- Winstrol tablets (8 hours) 9-12 HOURS - Anavar (8 to 12 hours) . anabolic steroid agents do not show up on a standard 12-panel drug test. However, sports authorities do not rely on these standardized tests to determine if athletes are using performance-enhancing agents. . or urine and hair. Depending on the test used, the detection .

### Do they test for steroids? : r/newtothenavy - Reddit

In rare cases, serious and even fatal cases of liver problems have developed during treatment with stanozolol. Contact your doctor immediately if you experience abdominal pain, light colored stools, dark colored urine, unusual fatigue, nausea or vomiting, or yellowing of the skin or eyes. These may be early signs of liver problems.

### Will Winstrol show up in a urine test? All to know about Winstrol

Once you take the product, it begins to work within 90 minutes and lasts up to 6 hours. 5-7 days for moderate use Yes, Winstrol can show up in a urine drug test. e. It analyzes your urine for the presence of certain illegal drugs and prescription medications.

## Does Winstrol Show Up in a Urine Test? Everything You Need to Know

suzanne66 29 April 2012 It would not be typically tested for in a work drug test. Drugs tested for in standard work drug test are Cannabinoids (cannabis, marijuana, hash) , Amphetamines (amphetamines, methamphetamine), Cocaine (cocaine hydrochloride, crack), Opiates (heroin, opium, morphine, codeine), and PCP (pencyclidine).

### Steroid Detection Times - steroid

Drug	Trade Name	Approximate Detection Time in Days	
		Average	Possible
Alcohol (Ethanol)	--	0-1	--
Amphetamines	Dexedrine, Desoxyn	1-2	3
Barbiturates			
Secobarbital, Pentobarbital	Seconal, Nembutal	1-2	3
Phenobarbital	Luminal, Donnatal	1-3	5
Benzodiazepines	Valium, Ativan, Dalmane, Librium, Xanax, Serax	1-9	21
Cocaine	--	1-5	--
Ethchlorvynol	Placidyl	1-3	5
Glutethimide	Doriden	1-3	--
Hydroxyzine	Vistaril, Atarax	1-3	--
LSD	--	1-3	5
Marijuana (Cannabinoids)			
-- 100 ng screen	--	1-5	18
-- 50 ng screen	--	1-9	21
-- 20 ng screen	--	1-10	30
Meperidine	Demerol	1-3	--
Meprobamate	Equanil, Equagesic	1-3	5
Methadone	Dolophine	1-2	3
Methaqualone	Quaalude	1-5	14
Opiates	Morphine, Percodan, Tylox		
	Dilaudid, Codeine	1-2	3
PCP (Phencyclidine)	--	1-7	21
Pentacozine	Talwin	1-3	--
Phenmetrazine	Preludin	1-3	--
Phenothiazines	Thorazine, Phenergan, Mellaril	1-4	9
Propoxyphene	Darvon, Darvocet	1-2	3
Quinine	--	1-3	5
Tricyclic Antidepressant	Elavil, Sinequan, Tofranil, Pamelor	1-4	9

Another example, Winstrol (Stanozolol) can be detected via the presence of 3'hydroxystanozolol in the urine, which is a metabolite of Winstrol that lingers in the user's urine for up to 10 days following use. The use of mass spectrometer can even detect non-metabolized Nandrolone molecules in urine due to its unique properties.

## How Long does Winstrol Stay in your System? (Can It Be Detected in a .

Beginners should not exceed a 6 week cycle because of the effects on the liver. To build more muscle on a Winstrol cycle and to negate the suppression of testosterone, stacking with a testosterone ester at 250-500mg per week is ideal for beginners. Week 1-12 - 500mg/week Testosterone Enanthate, . 5mg/ eod Arimidex.

## Steroids Half-Life: Length of Stay In the Body System - Addiction Resource

Different steroids have different half-lives, and the longer the half-life, the longer it will take for the compound to exit your system completely. Anadrol - 16 hours or less. Andriol (testosterone undecanoate) - 8 hours or less. Dianabol - 6 to 8 hours for oral; 60-72 hours for injectable. Halotestin - 6 to 8 hours.

## **Do Steroids Show Up On Drug Tests? - Anabolicco**

Oral fluid tests, also known as saliva tests, are a non-invasive method of drug testing that analyzes a person's saliva for the presence of drugs or their metabolites. These tests can detect recent drug use and are often employed in situations where a rapid result is required, such as roadside drug testing.

## Stanozolol: Uses, Dosage & Side Effects - Drugs

How long can Winstrol be detected in urine? How long does it take Winstrol to work? What is the best method for removing steroids from the body? Do steroids show up in a workplace drug test? Legal Safer Alternative to Winstrol Winsol by Crazy Bulk Conclusion How long does Winstrol last in your body?

## Does Winstrol Make You Pee a Lot? What You Need to Know

Yes, Winstrol can make you pee a lot more than usual. This is because it increases the amount of water that your body expels as urine. This increased production of urine can be beneficial for some people in certain cases, but it can also be detrimental depending on your health and lifestyle. One of the side effects of Winstrol use is increased .

### Winstrol Cycle (Stanozolol Cycle Guide) - Steroid Cycles

Put simply: the drug testing process can not find a steroid which it does not know exists. But when it comes to the most commonly used steroids, these will always be picked up in drug testing where metabolites remain in the body.

## How Long does Winstrol Stay in Your System? Find Out

Yes, Winstrol can show up in a urine drug test. Winstrol has a detection time of up to 2 months, meaning it can be detected in a urine test for up to 2 months after use. This is because Winstrol is metabolized by the liver and excreted through the kidneys, which means it can be detected in urine tests.

### What type of drug test is used to detect Winstrol?

Winstrol or "Winny" has been around for quite awhile now and it's available in tablets or injectable form. Winstrol (Stanozolol) is most commonly used in cutting cycles. Winstrol Cycle. Winstrol is most commonly dosed at 50 mg/day and occasionally used as high as 100 mg/day.

## Does Winstrol Show in a Urine Test? - blockedopervision

In a urine test, Winstrol can be detected for up to 2 months after the last dose. In a blood test, Winstrol can be detected for up to 9 weeks after the last dose. In a hair test, Winstrol can be detected for up to 3 months after the last dose.
