

# Estanozolol Y Equipoise | Estanozolol O Dianabol - Equipoise Y Winstrol : BritishDragon

Stanozolol is an organic heteropentacyclic compound resulting from the formal condensation of the 3-keto-aldehyde moiety of oxymetholone with hydrazine. Like oxymetholone, it is a synthetic anabolic steroid. It has both anabolic and androgenic properties, and has been used to treat hereditary angioedema and various vascular disorders. Durante la "etapa de corte", los culturistas pueden usar Equipoise para ayudar a mantener la masa que ganaron durante las etapas de volumen, y combinarlo con Winstrol (estanozolol) o acetato de trembolona que ayuda a perder grasa mientras se gana músculo de forma más efectiva.

## Información sobre Equipoise

El estanozolol es un esteroide anabólico sintético derivado de la dihidrotestosterona, promueve los procesos de reconstrucción de los tejidos corporales y revierte el catabolismo corporal. Se usa clínicamente para disminuir la severidad y frecuencia de los ataques del angioedema hereditario, y en el tratamiento de la criofibrinogenemia. Equipoise (Boldenone Undecylenate) is a very long lasting ester, and it can take 4-6 weeks to "kick in." Thus, the average recommended cycle is a minimum of 12 weeks, but preferably 16 weeks. When stacking tren and EQ, one can expect natural testosterone suppression, so adding a Testosterone ester to this cycle is recommended.

## Testosterone Dihydro Boldenone - Boldenona Estanozolol Y ...

1-testosterone (dihydroboldenone), or DHB for short, is an anabolic steroid that has some unique properties of interest to bodybuilders. Interestingly, in spite of the fact that the name can be confusing, in no way is DHB testosterone. In fact, it is simply the 5alpha reduced form of Equipoise (boldenone), which acts in a completely different way.

<b>SUPPLEMENT FACTS</b>		
Serving Size: 3 capsules per day
