6 to 11 years: 100 to 200 mg orally every 4 hours as needed, not to exceed 1.2 g/day 12 years or older: 200 to 400 mg orally every 4 hours as needed, not to exceed 2.4 g/day Sustained release formulation: 2 to 5 years: 300 mg orally every 12 hours, not to exceed 600 mg/day 6 to 11 years: 600 mg orally every 12 hours, not to exceed 1.2 g/day The primary end point was met, with dose-dependent improvements in UAS7 at week 8 occurring at 200 mg twice daily and 150 mg daily, but not at 50 mg daily of fenebrutinib versus placebo.

Clinical data. A phase 1 study of andrographolide in HIV-positive patients showed no effect on viral

replication after 6 weeks, despite increased CD4 + counts.⁴⁴ A clinical study evaluated the effect of *A. paniculata* extract 200 mg/day for 5 days on 9 self-evaluated symptoms (cough, expectoration, nasal discharge, headache, fever, sore throat, earache, malaise/fatigue, and sleep disturbance) in.

The number of degranulated mast cells was counted and compared within the different treatment groups. In the in-vivo study, the rats were first grouped into negative control (vehicle only), positive control (Disodium cromoglycate) and 2 test groups (EEQI: 100 and 200 mg/kilogram). The animals were pretreated for 12 days. [full article](#)
