Ghrelin has two major effects, stimulating both GH secretion and appetite/meal initiation.

**TESTOSTERONE
CYPIONATE**

10ml

Testosterone Cypionate
200mg/ml

BATCH NO. 11389 EXP. DATE 06/14

GHRP-2 is a synthetic agonist of ghrelin, the newly-discovered gut peptide which binds to the growth hormone (GH) secretagogue receptor. Ghrelin has been shown to have two major effects, stimulating both GH secretion and appetite/meal initiation. GHRP-2 has been extensively studied for its utility as a growth hormone secretagogue (GHS).

GHRP-2 (Growth Hormone Releasing Peptide-2) is a single, non-glycosylated synthetic met-enkephalin analogue. GH-releasing peptides (GHRPs) are synthetic peptides that, like GHRH, act directly on pituitary somatotrophs to stimulate GH release. [see post](#)

What is Growth Hormone Releasing Peptide 2 (GHRP-2)? GHRP-2 is a synthetic ghrelin analog. GHRP-2 (known as KP-102 as well) is a short polypeptide belong to group of releasing proteins of growth hormone, it contains six amino acids only. Its molecular mass is 817.9 and its molecular formula is $C_{45}H_{55}N_9O_6$. This hexapeptide was synthesized in early 90s. The group of peptides which KP-102 belongs to, was discovered about 20 years ago as.

Figura 1. Promedio ($\bar{X} \pm EE$) para la producción de leche por día (kg/día) entre la semana 12 y 24 de lactancia en vacas no tratadas (GC♦) y tratadas con STBr (GT■).

GHRP-2 contains 10mg of Growth Hormone-releasing Peptide 2. This drug belongs to the Growth Hormone Releasing Peptides (GHRP) class. These are all synthetic compounds that mimic, to some degree, the effects of ghrelin, an endogenous gastrointestinal peptide hormone. Ghrelin is secreted by the stomach at times of fasting (when unfed). The effects of

GHRP-2 (also named KP102), a new growth hormone-releasing peptide, on the release of growth hormone (GH) and growth performance were examined in swine. The single intravenous (i. v.) injection of GHRP-2 at doses of 2, 10, 30 and 100 microg/kg body weight (BW) to cross-bred castrated m ...

GHRP-2 (Growth Hormone Releasing Peptide -2) is a non-natural, commercially synthesized, super-analog of Growth Hormone Releasing Peptide-6 (GHRP-6) which is competent enough to strongly stimulate effect on human growth hormone (HGH). It is a peptide which also plays a role as an agonist (activator) of ghrelin, the recently-found gut peptide. [description](#)
