Ocenjeno. 2.00. od 5 na osnovu 1 ocene kupca. (1 recenzija korisnika) Testosterone propionate 100mg/ml količina. Dodaj u korpu. Kategorija: Arenis Medico.

Testosterone propionate is oil-based injectable testosterone. Testosterone Propionate is having anabolic as well as androgenic properties. The Propionate esters has shorter half life compared to cypionate & enanthate esters. Testosterone propionate has a duration of effect of 1 to 2 days. Therefore Testosterone Propionate is much faster acting.

Testosterone Propionate is a type of testosterone that is considered a slow releasing anabolic steroid since it has a short half life. Testosterone Propionate is a fast acting testosterone version which is very valuable by those people who need to run a short steroid cycle, or need a fast increase in testosterone since this version of testosterone is having a shorter time needed for the. Odata cu testosteron propionat poate fi inceputa o cura de enantat de cateva saptamani administrand cate 250 mg enantat si 50 mg propionat, concomitent. O alta posibilitate de administrare a testosteronului propionat presupune injectarea regulata cel putin o data pe zi. Rezultatele cele mai bune se obtin la 50-100 mg pe zi.

100mg / ml Testosteron propionat U.S.P. (10ml VIAL) Hemijska imena 4-androsten-3-one-17beta-ol, 17beta-hydroxy-androst-4-en-3-one. Nuspojave Testosteron se lako aromatizira u tijelu na estradiol (estrogen). Enzim aromataza (estrogen sintetaza) odgovoran je za ovaj metabolizam testosterona. Testosterone Propionate can be injected into any muscle such as buttocks, shoulder, or even triceps. As a short-acting steroid, it is a perfect choice for the persons with low testosterone levels, for athletes performance, who want to promote the increase of lean muscle mass, strength, recovery, and endurance.

The difference between propionate and other testosterone esters (cypionate, enanthate) is the period of impact. Testosterone propionate is much faster acting than an androgenic hormone or testosterone cypionate, enanthate and requires a much more frequent serving, to be able to sustain steady blood ranges.
