TREN HEX 100. Trenbolone Hexahydrobenzylcarbonate is the brand name for the steroid commonly referred to as Parabol. It is a popular choice due to the long ester, causing the half-life to be about 14 days. This is compared to 3 days with many other steroids in the same category. It is very powerful and works quickly. Answer: The Testosterone Deca durabolin stack is a good one. However Trenbolone acetate is at least four or five times more powerful than Testosterone. And nothing can compare to that for muscular gains — however the side effects are severe — and generally a trainee is going to want to have comp.

Bullion Pharma Tren A 150

Just got my hands on some tren hex. want to make sure i got my info right. i should be treating it like i would tren ace correct? was thinking of 100mg eod along with prop 100mg eod. ancillaries are dost and adex [visit these guys](#)

Tren Hex is right in between Tren Ace and Tren Enanthate i think. You should be able to get it to hold at 100mg/ml no problem with a 2/20 ratio. 07-26-2005, 08:37 PM #3

Tren hex is the only form of tren that was ever approved for human consumption. It is a very long ester but other than that your body won't know the difference between E and Hex. I am suspicious of labs who claim to have tren hex.

PHARMACEUTICA However if as a beginner you choose to give Tren Hex a go, it's vital to start at a low dose and evaluate its effects; ideally in the range of 100mg to 150mg weekly. Intermediate users will be looking at dosage of 150-200mg weekly, while advanced users can also still achieve exceptional results at 200mg. Its 100mg tren E a week, 100mg mast E, 150mg test E, 30mg ostarine day, 15mg mk 677 day, and 40IUs of lantus insulin a day, with 6IUs of humalog. I expect great results as mk677 and lantus by themselves have given me phenomel results, close to what a test cycle would give me.

Excerpt: how long for tren hex to kick in? and whats the dose for proviron? currently ran 3 weeks of tren ace then spilt the bottle by accident on 2nd shot of tren hex 100mg eod 3wks of wini 50mg ED proviron 25mg ?? wanted to do a short 6wk cycle but not sure now any advice?
