Oxy ELITE Pro Super Thermogenic contains hidden drug ingredient

OxyELITE Pro is the proprietary name of a series of multi-ingredient nutritional supplements that are typically marketed as weight loss, body building, "fat burning" and performance enhancement aids. Initial ingredients in the products included caffeine and dimethylamylamine (DMAA) which in animal studies led to weight loss.

'Stanley Tucci: Searching for Italy': What's on the menu | CNN

OxyElite Pro is a thermogenic fat burner and weight loss supplement that maintains popularity among fitness enthusiasts. Initially launched in the early 2010s, Oxyelite Pro quickly became like a household name in the world of fitness supplements for fat burners.

USP Labs OxyElite Pro New Formula Diet Aid - Supplement Warehouse

Oxyelite pro (OEP) (90 Caps) is a scientific and thorough formula that attacks the unwanted hard to burn fat. Oxyelite Pro by USPLabs demonstrated an ability under which it attacks the Alpha-2 fat - also known as "hard to burn fat" on stomach, hips & thighs - by blocking Alpha-2 receptor. This way a large number of fats cells are actually reduced.

Oxy Elite Pro was a hugely popular diet aid years ago, and is now back and better than ever with a new formula! With this reformulation, OxyElite Pro is now powered by DMHA! Otherwise known as 2-Aminoisoheptane HCl, DMHA is synergistic with another key component of OxyElite Pro's new formula, caffeine.

Safety assessment of the dietary supplement OxyELITE™ Pro (New Formula .

The most recent suspect in this controversy involved OxyELITE Pro, a dietary supplement whose previous formulation was removed from the market due to serious adverse health effects related to its combination of purportedly natural stimulants and sympathomimetics, including 1,3-dimethylamylamine (DMAA) (U. S. Food and Drug Administration, 2013a,b).

This new Oxyelite product from USP Labs is the only one of its kind for the 2019 re-release. In OxyElite Pro, the DMHA (2-Aminoisoheptane) and Geranium extract complement one another quite well. Hi-Tech Pharmaceuticals uses the remaining uncontested alkaloids in Geranium Extract after removing the DMAA.

Abstract

Background: OxyElite Pro (OEP) is a dietary supplement to increase metabolism which contains as key stimulant the ingredient 1,3-dimethylamylamine (DMAA). Serious adverse effects have been reported after OEP consumption however, these effects are related to poisoning or overdose. To our knowledge, no one studied the effects of OEP at controlled doses. Thus, the aim of this study was to evaluate acute and chronic OEP effects, at controlled doses in Wistar rats, on physical performance, metabolic parameters, liver injury markers and oxidative stress markers and mitochondrial biogenesis in skeletal muscle.

Methods: Rats were divided in control, 4.3 mg OEP/kg, 12.9 mg OEP/kg and 25.8 mg OEP/kg. All groups were submitted to supplementation with OEP for 4 weeks and the experimental protocols were performed 30 min after the first OEP administration (acute response) and 30 min after the last OEP administration at the end of the fourth week (chronic response).

Results: Running distance and running time increased after acute administration of 12.9 mg OEP/kg (2.6-fold) and 25.8 mg OEP/kg (2.8-fold). Since no effect on the exercise tolerance test was observed at the lower OEP dose (4.3 mg OEP/kg), this group was removed from further analyzes. On other hand, running distance and running time decreased after daily supplementation for 4 weeks also in both groups (64% in 12.9 mg OEP/kg and 72% in 25.8 mg OEP/kg). Chronic supplementation at both 12.9 and 25.8 mg OEP/kg decreased TBARS levels in soleus muscle (36 and 31%) and liver (43 and 25%). AOPP was also decreased by both doses in the liver (39 and 45%). Chronic administration of the highest dose, 25.8 mg OEP/kg, was able to reduce mRNA expression of PGC-1 α in soleus muscle (25%). No effect was found in other analyses such as spontaneous physical activity, body weight, food and water intake, hepatic toxicity, cardiac oxidative stress and mitochondrial DNA amount.

Conclusion: Maximum and not recommended doses of OEP ingested acutely presented stimulating effect on the ability to exercise. However, its daily consumption for 4 weeks showed antioxidant effects in soleus muscle and liver which may have decreased the PGC-1 α mRNA expression on soleus muscle and contributed to the impaired performance in the exercise tolerance test.
