Peptides and Tanning Research - Peptide Sciences

To Summarize What is Melanotan II? Melanotan II (Melanotan II) is an injectable peptide used mainly to vastly increase your body's ability to tan. The pigment of your skin getting darker is the result of UV ray exposure. As your skin becomes exposed to UV rays, melanin is produced to protect your skin from burning and sun damage.

Tanning Peptides: What are they, and how to use them?

THE BENEFITS OF
PEPTIDES

- ✓ Peptides help to reduce the signs of fine lines and wrinkles, and can even firm skin
- ✓ They don't cause irritation like exfoliants or retinol, making them perfect for every skin type
- ✓ However, they work great alongside other anti-aging ingredients for a well-rounded skincare routine
- ✓ Work by signaling receptors in skin to behave in certain ways - mainly to encourage collagen production

BEAUTY AFFAIRS
LUXURY SKINCARE & COSMETICS
