*It's not a Diet, It's a Life*

Testosterone is injected under the skin or into a muscle, usually given every 2 to 4 weeks. Testosterone Enanthates should be given only by a healthcare professional. The length of treatment with Testosterone Enanthate will depend on the condition being treated. Beginner Testosterone Enanthate doses are in the range of 300 - 500mg weekly, especially for a very first anabolic steroid cycle. Even the lowest end of the range, 300mg, will provide some dramatic improvements in physique and strength provided that the beginner's nutrition and training is properly adjusted and strict.

Testosterone Enanthate is one of the oldest and perhaps the most commonly used anabolic steroid of all time. Testosterone Enanthate is a slow acting release form of the testosterone hormone and would be the first large/long ester testosterone form used. Synthetic testosterone itself would be developed in the 1930's. #dentistswholift #dentist #dentistry #dentalschool #dentalstudent #dentalstudents #dentalstudentlife #doctor #medicine #dentalassistant #dentalhygienist #dentistsofinstagram #doctor #predental #studentsofdentistry #predent #dentalmemes #dentistrymemes #dentalschoolproblems #prehealth #dentalhygiene #pediatricdentistry #pediatrics Also known as testosterone heptanoate, Testosterone Enanthate is an anabolic and androgenic steroid (AAS) that can be used to treat low testosterone levels. In fact, it is suitable for Testosterone Replacement Therapy (TRT), as this injection can help to replenish natural testosterone levels and ensure your body doesn't suffer from its absence.
