Oral Methandienone has a short half-life, so it is most effective when the dosage is split up throughout the day. Because oral Dianabol capsules are available in 10mg tablets, beginners can take a tablet in the morning, afternoon, and night to compose their 30-milligram dose.

Similar to testosterone and Anadrol 50, Methandienone (other known as Dianabol) is a potent steroid, but also one which brings about noticeable side effects. For starters methandienone is quite estrogenic. Gynecomastia is often a concern during treatment, and may present itself quite early into a cycle (particularly when higher doses are used).
