Clearly we are not professional marketers. At Build Fast Formula, we look to the science & research to create premium, effective and affordable products, which is why we say: The formula is our marketing
You will see 350mg tren will be enough, but 350mg of test and masteron are way too little for decent results. I start feeling masteron from 400mg on. And test, from 750mg. I would do a test only cycle, but if you already have the blend, do what I said, start low, pin ED, use insuline 1inch pins, and adjust your dose depending to your sides.
