Além da síntese proteica, o aumento nos níveis de testosterona também pode aumentar a síntese de creatina no músculo. A creatina, armazenada na forma de fosfato de creatina (CP), desempenha um papel na fabricação de ATP, que é a principal fonte de energia para os músculos. As stated above, Sustanon is a four part testosterone mixture; specifically it is comprised of Testosterone Propionate, Testosterone Phenylpropionate, Testosterone Isocaproate and Testosterone Decanoate.
