DNA replication and repair involves three distinct DNA ligases: ligase I (LIG1), ligase III (LIG3), and ligase IV (LIG4). LIG3 is the only ligase of the three present in the mitochondria, where it plays a role in mitochondrial DNA (mtDNA) maintenance and repair. Previous studies have shown inactivation of the LIG3 gene has resulted in mitochondrial dysfunction. [have a peek at these guys](#)

Some patients include the deltoid muscles a part of their regular rotation of testosterone injections sites - but all patients are urged to discuss their intended site choices with their doctors prior to administering their treatments, as there may be special precautions associated with the regular use of particular sites to be aware of.

How to Give Yourself a Testosterone IM Injection - 2 - Injection Site Vastus lateralis muscle in the thigh: Choose this site if you are injecting to yourself, or if a caregiver gives you the injection. Look at your thigh and divide it horizontally into 3 equal parts. The injection will go in outer middle third. The thigh is a good place to give ...

Testosterone injections are typically intramuscular - that is, given directly into a muscle. Two relatively easy and accessible sites for intramuscular injection are the deltoid (upper arm) or the glut (upper back portion of the thigh, ie, the butt cheek). #medstudent #medicine #medlife #med #medical #medquiz #medicinstudent #medicalcases #mbbs #mbbslife #mbbsstudent #mbbsstudent #mbbsexams #mbbsstudent??????? #mbbsmnemonics #munnabhaimbbs #medicalmemes #medicinememes #medicomemes #student #medicalcases Injection Site With IM injections, Testosterone is deposited deeply into vascular muscle tissue. The deltoid (arm), vastus lateralis (thigh), and gluteal muscles (hip/buttocks) are the most common sites for IM injections. Some injection sites are more prone to pain than others.
