#1 Hi, I've read some websites and watched your dbol video's and found some really excellent information in them. I'm a first time dbol user, looking to run a 4 week cycle of 20/30/30/30 with Nolva as PCT. I'm curious as to what times of the day I should take dbol when running 20mg/day and when taking 30mg/day?

#1 I've heard 10-15mg is equivalent to TRT dose when it used to be used for that. With that in mind I've seen dose recommendations from 20mg to 70mg. But it's not clear if those are stacked dosages. So would a higher dose, 30 - 40mg be better on an oral only cycle? I know everyone says if you're gonna do em do em proper and inject 500mg test.
