IGF-1 DES is a shortened form of IGF-1 that consists of the first three amino acids of the IGF-1 sequence (des (1-3)). It has a shorter half-life compared to the full-length IGF-1 and lacks the C-terminal extension found in IGF-1 LR3. IGF-1 LR3 is a modified form of IGF-1 that has a longer half-life than the native IGF-1. [pop over here](#)

The researchers in this study suggested that IGF-1 DES may have the potency to differentiate certain types of cancer cells (in this case, colon carcinoma HT29-D4 cells). IGF-1 DES peptide is available for research and laboratory purposes only. Please review and adhere to our Terms and Conditions before ordering. References: 1.
