Methanabol when taken orally becomes active very rapidly, but only remains active for less than half a day. Often, for this reason, dosages were spread through the day. It is known that 10 mg of the Methanabol was enough for full androgen replacement in a man, and this dose increased androgen anabolic activity roughly 5 times over normal and ... Substance: Methandienone Manufacturer: British Dragon Pharmaceuticals Pack: 100 tabs (10mg/tab) [her response](#)

Methanabol 10mg is trade name for well known Dbol, a popular oral strong androgenic/anabolic steroid for bulking and strength. I think every bodybuilder heard about Dbol :) The Methanabol 10 is fast acting so you will feel it pretty quick. Since it will put stress on liver avoid longer than 5 weeks cycles.

By tabs: Men: 15-50 mg/day. Women: 5-10 mg/day. Methanabol (Methandienone, Dianabol) has a tiny half life of just about 3-5 hours. As a consequence, multiple requests of Methandrostenolone (Methandienone, Dianabol) all though the day are required to complete a secure blood level. Methanabol (Methandienone, Dianabol) has to either be applied ... [consultant](#)
