Drug Monograph

Drug/Drug Class: Voriconazole (Vfend®) / Antifungal

Prepared for: Missouri Medicaid

Prepared by: Heritage Information Systems, Inc.

New Criteria **Revision of Existing Criteria**

Purpose

The purpose of this monograph is to provide an extensive review of new therapy to determine whether the reviewed drug should be considered a prior authorization drug or not (open access). While prescription expenditures are increasing at double-digit rates, payors are evaluating ways to control these costs by influencing prescriber behavior and guide appropriate medication usage. This review will assist in the achievement of qualitative and economic goals related to health care resource utilization. Restricting the use of certain medications can reduce costs by requiring documentation of appropriate indications for use, and where appropriate, encourage the use of less expensive agents within a drug class.

Introduction ^{1,2}

On May 28, 2002, voriconazole (Vfend®) was approved by the Food and Drug Administration (FDA) for the treatment of deadly fungal infections. Voriconazole is classified as a triazole antifungal agent. Other agents in this class are fluconazole (Diflucan®) and itraconazole (Sporonox®). This medication is indicated for the primary treatment of acute invasive aspergillosis. Additional agents include intravenous amphotericin b and oral and/or intravenous itraconazole therapies. It has also been approved as salvage therapy for rare but serious fungal infections caused by *Scedosporium apiospermum* and *Fusarium spp.* Unlike other agents, voriconazole has been approved in both oral and intravenous (IV) formulations.

Dosage Form(s) ^{1,2}

Tablets:

- 50mg tablets – white, film-coated, round
- 200mg tablets – white, film-coated, capsule shaped

Powder for Solution for Injection (IV)

- supplied in a single use vial as a sterile lyophilized powder equivalent to 200mg Vfend and 3200mg sulfobutyl ether beta-cyclodextrin sodium (SBECD).
