Food and Drug Administration (FDA): Overview and Issues

Summary

The Food and Drug Administration (FDA) is the agency within the Department of Health and Human Services (HHS) that regulates human and animal drugs, medical devices, biologics, and most foods. This report describes FDA, surveys agency-related issues Congress faces, and cites CRS reports where readers can find more information.

FDA Overview

FDA is an agency within HHS that regulates a wide range of products valued at more than \$1 trillion. (See **Table 1.**) The agency is responsible for the *safety* of most foods (human and animal) and cosmetics, and it regulates both the *safety* and the *effectiveness* of human drugs, biologics (e.g., vaccines, blood and blood components), medical devices, and animal drugs. In many cases, its responsibilities abut those of other agencies. (See **Table 1.**) In such cases, interagency agreements may define the regulatory boundaries.

The primary law authorizing FDA activities is the Federal Food, Drug, and Cosmetic Act (FFDCA; 21 USC Chapter 9). (See **Table 2.**) FDA is also responsible for implementing provisions in other laws, most notably the Public Health Service Act (PHSA; 42 USC Chapter 6A). For example, FDA's authority to regulate most human biologics flows both from the PHSA (§351) and from the FFDCA. (See **Table 2.**)

FDA has three offices that perform agency-wide functions. The Office of the Commissioner conducts overall agency coordination. The Commissioner, FDA's top official, requires Senate confirmation. The Office of Chief Counsel handles the agency's legal needs. FDA's largest office, the Office of Regulatory Affairs (ORA), handles FDA's inspection and enforcement activities. It employs about one-third of the agency's personnel.

FDA's product-specific regulatory responsibilities are handled by five centers: the Center for Biologics Evaluation and Research, the Center for Devices and Radiological Health, the Center for Drug Evaluation and Research, the Center for Food Safety and
