Has anyone experience using Mast for lean bulking?

Maybe add some Dbol for a kickstart. (sample) 01-12 Test @ 500mg/week 01-10 Tren @ 400mg/week

01-04 Dbol @ 40mg/day 11-14 Anavar @ 40mg/day 15-20 PCT though I might run the test for 15 and the Anavar weeks 11-17. I personally would suggest something a bit unorthodox - Test, Tren, Deca.

Best ratio Test-Tren-Mast-Var for cutting. | Professional Muscle .

Hi! Not a beginner here. Last year my most successful cycle made me my leanest look ever: low Test P + high Tren A + Mast + oral Anadrol (first few weeks). It was more of a cutting cycle because my appetite was really suppressed. Body fat was below 10% for the first time ever in my life but I never really lost any muscle. This year, I'd like to do Test and Tren again, but this time high Test .

Mast will work the best when run at a 1:1 ratio with your other compounds. So if you next cycle would be Sust/EQ/Mast run at 600/600/600 a weeks for 14-16 weeks with winny of the front end or last 4 weeks/or drop it out all together. Shorter cycle same doses just drop the EQ for a 12 week run of Sust/Mast.

Testosterone greatly enhances the anabolic rate and reduces the progestin activity of trenbolone. Test + Tren + Dbol is designed for athletes with experience and is not recommended as the first cycle. To the end, there will be an increase in about 20lbs of dry stable muscles. Testosterone: 200-500 mg weekly; Guys: Stats: 27 yo 5'8 190lb 11-12% BF I'm starting a test/dbol/mast cycle next week and I've been conflicted on how I run my mast e. Here's my layout. Trenbolone triggers powerful anabolic processes and boosts bulking while Masteron burns fat without damage to the lean muscles. Weight increase will not be as significant as when using Dbol or Deca, but the quality is exceptional. 10-15 lbs of steep shape are the average expected results. Test: 100 mg every other day; Tren: 200-350;
