Results of HGH Therapy - Nexel Medical

HGH results after 2 months - More noticeable results occur after two months of therapy, including clearer skin and increased muscle tone. Your body is now regenerating cells at a quicker rate. You may notice an improvement in your eyesight and night vision. Your metabolism continues to increase, allowing fat loss to quicken.

HGH Before And After Results: Real Users Sharing HGH Experiences

Human growth hormone, also known as HGH and somatotropin, is a natural hormone your pituitary gland makes and releases that acts on many parts of the body to promote growth in children. Once the growth plates in your bones (epiphyses) have fused, HGH no longer increases height, but your body still needs HGH. After you've finished growing, HGH .

Wondering what HGH results will look like before and after doing a human growth hormone cycle for one month? Here are the benefits:

Human Growth Hormone (HGH) - Cleveland Clinic

Introduction. In 1962, a 35-year-old woman with hypopituitarism was the first adult treated with pituitary growth hormone (GH). She felt improvement in physical vigor and psychological well-being after two months of treatment ¹. At that time, however, limited availability of pituitary GH restricted its therapeutic use to those few children with more severe forms of growth retardation.
